## Comments

Forward any sites you feel should be added to me at [ben.benavides@gmail.com](mailto:ben.benavides@gmail.com) or [bbenavides@agm-az.com](mailto:bbenavides@agm-az.com)

This is a living document and at the time of publication all links were active but don't give up if you get the "Page Not Found" message. If a link does not work, try copying the link to the URL window. If it still doesn't work place the cursor at the end of the URL address and backspace to the first slash and hit the enter key. If it still does not work keep backspacing to the next slash and press the enter key. Keep doing this until you either get a hit or enter the home page. Once in the homepage you should be able to find what you are looking for. But we all know the chaotic nature of the WEB and over time some sites will be pulled off or no longer function. If this is the case, you have a final recourse - the wayback machine, <http://www.archive.org/>. Copy the entire URL and paste it into the "take me back" box in the homepage. This should take you back to the original homepage and from there you can pick up key words to find what you are looking for.

I realize also that we don't think alike. If you feel some links do not belong in a particular category let me know and I will make the adjustments. If you feel a new category should be added please justify it, and if you discover links that you think are relevant to the handbook please submit your list and I will update. Together we can create a valuable guide that is not only useful to the intelligence analyst but also beneficial to all branches of the military, and civilian agencies. The idea is to develop something that any branch (infantry, artillery, armor, etc) besides MI can use for their own intelligence gathering. Remember, "Every Soldier Is A Sensor". We could also apply this to the civilian world and say "Every Citizen Is A Sensor". A good example is the individual that spotted the smoking SUV in Times Square and alerted police to the situation. Had the contents smoldered long enough it is quite possible the situation could have turned into something more serious.

While I have tried to get you to your objective as quickly as possible, there is still no substitute for effective searching techniques. I strongly recommend looking over this very basic WEB searching techniques site <http://www.lib.berkeley.edu/TeachingLib/Guides/Internet/Handouts.html> and download the tutorial with powerpoint slides and handouts. The information is from 2009 but still very appropriate. I also like Russ Haynal's Internet Training at <http://navigators.com/opensource.html> and I think you will too. Very easy to follow and digest the information even while working at your own pace.

There are two areas one cannot get away from on the WEB, pornography and theological/political agendas. I have definitely made sure that none of the links end up with the former, but the latter cannot be avoided.

I have been advised that I probably have published too much information and have made it easier for the criminal element. All the information gathered has been through open source harvesting and anyone with even the slightest knowledge of good searching techniques will be able to gather the same information. For example, the nuclear related portions in this handbook when merged together will produce a neat little file. You can gather this same information at the public library or by visiting several blogs and merging the results. Scattered throughout this handout you will run across material like Unclassified/FOUO, Law Enforcement Sensitive (LES), Restricted, Controlled Unclassified Information, and other caveats. Again, this is all open source exploitation. I did not hack into any sites! That's my story and I'm sticking to it.

**Those links that require a .mil or .gov return address are included for those authorized access, they will not work for those not authorized access.**

Prior to leaving the service of the U.S. Army, I established that this is my intellectual property and there are no applicable constraints on my sharing it with the public.

## Open Source Intelligence (OSINT): What It Is and What It Isn't

According to the [NATO Open Source Intelligence Handbook](#), November 2001, there are four distinct categories of open source information and intelligence.

**1) Open Source Data (OSD).** Data is the raw print, broadcast, oral debriefing, or other form of information from a primary source. It can be a photograph, a tape recording, a commercial satellite image, or a personal letter from an individual. A good example is a reporter embedded with forces in Afghanistan or Iraq. He/she is taking pictures, talking to soldiers, recording conversations and firefights, and taking notes with a pen or pencil. This is considered raw data until it goes through a conversion process to create a coherent product.

**2) Open Source Information (OSI).** OSI is comprised of the raw data that can be put together, generally by an editorial process that provides some filtering and validation as well as presentation management. OSI is generic information that is usually widely disseminated. Newspapers, books, broadcasts, and general daily reports are part of the OSI world. An example is a reporter embedded with forces who takes the raw data and converts it into a meaningful article that is printed in newspapers, magazines or broadcasted over the air waves. OSI is what a Soldier would purchase at the bookstore inside the Post Exchange in the form of USA Today or Newsweek.

**3) Open Source Intelligence (OSINT).** OSINT is information that has been deliberately discovered, discriminated, distilled, and disseminated to a select audience, generally the commander and his/her immediate staff, in order to address a specific question. In the case of a battlefield commander, it would more than likely be answering the priority intelligence requirements (PIR) or specific orders or requests (SOR). OSINT, in other words, applies the proven process of intelligence to the broad diversity of open sources of information, and creates intelligence. Example: The meaningful article above (OSI) that was created from raw data is used to support an operation. It's quite possible that a photo accompanying the article may be of a house known to harbor insurgents. The photo in the article identifies the location and now can be used to support a tailored operation to attack the insurgents.

**4) Validated OSINT (OSINT-V).** OSINT-V is information to which a very high degree of certainty can be attributed. It can only be produced by an all-source intelligence professional, with access to classified intelligence sources, whether working for a nation or for a coalition staff. It can also come from an assured open source to which no question can be raised concerning its validity (live video of an aircraft arriving at an airport that is broadcast over the media). OSINT-V is OSINT for which there are either confirming or unavailable classified sources or there are no available classified sources disputing OSINT. OSINT-V is produced only when the analyst has access to classified sources.

Example: CNN reporter takes photos and reports on a bridge. Intelligence personnel are aware the bridge is vital for the movement of insurgent supplies; however, CNN is unaware of that. Classified information confirms that such a bridge exists. This in effect validates the reporting as OSINT-V, especially if the bridge is identified to be destroyed to keep insurgents from moving supplies. But, if there isn't anything in the classified holdings to deny the existence of the bridge, it is still considered OSINT-V since this is the first time the bridge has been observed and reported, and there are other sources like other reporters to backup the findings.

People in the intelligence business are realists and know that everything cannot be monitored simultaneously; construction of new infrastructure is continuously taking place around the world. We cannot keep track of all new buildings, bridges, roads or airfields being built. This is what makes open source reporting extremely valuable. It covers the areas the classical "INTS" are not assigned to cover. The only time OSINT-V can be disputed is when there is confirming evidence to deny the information.

Summary: How do I know when I have OSINT? The simple answer is the analyst does not have OSINT until the open source information has been processed and analyzed, and supports a specific requirement. The specific requirement can be a tailored operation or simply answering a question. The

analyst has to be very careful when it comes to distinguishing between OSI and OSINT. Open source information exploitation is exactly what the name implies, that which is gathered/collected from open sources. In general, it is information that is available to the general public without restrictions unless it is copyrighted material. These include newspapers, the internet, books, phone books, scientific journals, radio broadcasts, television, individuals, and other forms. On the other hand, OSINT is an intelligence gathering discipline that involves collecting information from open sources and analyzing it to produce usable intelligence, and there isn't anything that says intelligence must be classified in order for it to have utility. In the Intelligence Community, the term "open" refers to overt, publicly available sources (as opposed to covert or classified sources); it is not related to open-source software. OSINT is distinguished from straight research in that it applies the process of intelligence to create tailored knowledge supportive of a specific decision by a specific individual or group.

## How To Use Open Source Intelligence

By eHow Culture & Society Editor [http://www.ehow.com/how\\_2126848\\_use-open-source-intelligence.html](http://www.ehow.com/how_2126848_use-open-source-intelligence.html)

Open source intelligence is a process of information gathering from public and overt sources, such as newspapers and military trade journals, that produces "actionable intelligence." Far from being the hobby of amateurs, open source intelligence is used by official military and government intelligence agencies on a regular basis.

1. Gather sources. The number of possible open source intelligence outlets is limitless. Some basic ones are newspapers, which report on things like troop and fleet movement, and even civilians who visit other countries and can make relevant observations upon return. Strategy and defense information websites, such as Jane's Group, also provide high quality information for you to harvest.
2. Pick a region or topic. Monitoring all varieties of open source intelligence across regional and topical interests takes huge amounts of manpower. To effectively use open source intelligence you should focus on one region or issue at a time. This will help you to stay on top of the latest information and will allow you to develop a background understanding of intelligence items.
3. Connect the dots. Once you have gathered your sources you need to monitor news and information in order to connect the dots. Look, for example, at how heads of state visits coincide with arms sales. Then consider troop and fleet movement against rising tensions in various regions. Use widely available technology such as Google Earth, Bing Maps 3D, and others to get views of important locations. Take all this kind of information and try to deduce the most likely intelligence information from it.
4. Test your theories. One of the best ways to test a theory that you've constructed on the basis of open source intelligence is to publish the theory. You can post theories on strategy discussion forums or you can send your piece to influential military bloggers or even newspapers. Check the responses from other members of the open source intelligence community to see what the criticisms might be.

## ***Intelligence Gathering***

<http://www.theskanner.com/article/911-Special-Intelligence-QA--How-the-US-Gets-It-Where-It-Goes-2011-09-11>

By The Associated Press

Some questions and answers about the gathering and use of intelligence:

WASHINGTON (AP) — U.S. intelligence in the struggle against terrorism comes in many forms, maddeningly general, improbably precise, a game of sorts with vast consequences for winner and loser.

It's a satellite image showing tribesmen gathering in a remote area where none should be — the photograph so clear you can see the caliber of ammunition they are carrying.

It's a snatched bit of conversation between two terrorist leaders, overheard by a trusted source the terrorists don't realize is listening.

It's a stolen diplomatic cable. That's right, we steal.

Each of these sources and a multitude of others can become the tips that put an entire nation on alert, as a single tip has done from a single source just before the 10th anniversary of the Sept. 11 attacks.

Here are some questions and answers about the gathering and use of intelligence:

Q: What is intel?

A: Simply put, it is information from anywhere that the U.S. can use to its advantage in the world, either in pursuit of its goals or to protect its people. It can be as basic as a diplomat reading a local newspaper and passing on something interesting to a superior in an embassy or Washington. But it gets much more sophisticated and aggressive than that.

In counterterrorism, bits and pieces of information form a messy picture like an impressionist painting. Those collecting the signs and signals look for a pattern, eventually an image, that gives them a target to go after or tells them which target to protect.

Q: What are the main forms of intelligence?

A: Perhaps the spookiest is measurement intelligence, known as "MASINT," using far-away technology to get extremely up close and personal. The U.S. is capable of placing a sensor near a suspected terrorist hideout that can count the number of heartbeats in a room and gauge how fast they're beating. There are even efforts to understand what a "guilty" heartbeat pattern might be.

Masint, working in combination with other kinds of intelligence-gathering, was one of the clinchers in the raid that killed Osama bin Laden. The U.S. measured the approximate height of the tall man who paced beneath the trellis outside the kitchen in a Pakistani compound, to help determine bin Laden was that man.

Then there is human intelligence, or "humint," which has been around since the dawn of spycraft and is still vital. That's the tipster you cultivate and pay, or perhaps the unproven one who simply walks into a

U.S. embassy and offers information.

"Sigint," or signals intelligence, monitors or otherwise exploits radio, telephone or satellite phone transmissions. "Imint" is imagery intelligence that includes photographs showing the outlines of a nuclear power plant, obscured in desert sands, or a terrorist training base tucked in a mountainside.

Cybertracking is a newer tool, pursuing terrorists who use computers either to attack a computer network or, more often, to organize how their own human network would launch a physical attack.

Q: What happens to this mountain of raw material?

A: Each of those streams of data is captured by a multibillion-dollar worldwide network of U.S. satellites, armed drones, static blimps and high-flying spy aircraft, manned or unmanned, that suck up so much sound it takes massive computers to crunch all the data and help analysts overwhelmed by the technical information to find meaningful clues.

Sometimes these streams are collected by U.S. operatives — Americans or those in U.S. employ — who go behind enemy lines or into enemy homes, leaving behind the sensors that will provide the data.

True to its name, the Central Intelligence Agency is an "all-source" organization using all means.

Q: How do all these eyes and ears work together?

A: Sometimes they don't. After a Nigerian allegedly tried to bring down a Detroit-bound airliner on Christmas Day almost two years ago, it emerged that his father had warned U.S. diplomats about his son's possible terrorist sympathies, but that tip was lost in the blizzard of counterintelligence.

But in the bin Laden raid, a human source led to the compound in the Pakistani army town of Abbottabad. Signals intelligence monitored for phone calls emanating from there, and found none, because bin Laden forbade them, hoping to evade detection by just such technical means. Masint was derived from the imagery taken by drones and satellites.

All of this helped to convince CIA analysts they had found their man and persuade President Barack Obama to approve a dangerous and diplomatically risky raid into Pakistani sovereign territory.

Q: How is all of this intel sorted through so that the real threats are detected and averted?

A: The ever-present risk is that they won't be. One of the failings of pre-9/11 counterintelligence was that information was jealously guarded by the individual intelligence agencies. Word of a potential plot to fly planes into U.S. landmarks was received by one agency. Another agency had word terrorists might be attending flight school. Each organization kept to itself the dots of information that, when connected, could have revealed the larger pattern of a massive terrorist plot.

Before raw data and human tips can be called "intelligence," they must be analyzed, and if possible, corroborated. The CIA alone has 2,500 people in its Directorate of Intelligence devoted to that task. There are thousands more across the 16 intelligence agencies, sifting raw data, and cross-comparing within their own agencies, and with others, to spot a pattern.

Q: What does it mean to receive — and warn the public about — a credible and specific but unconfirmed threat, as in the latest case?

A: A credible threat means it was heard from a trusted source, not just anyone. Specific means the U.S. has details about when, where or how an attack might unfold. When a threat is specific and credible but unconfirmed, that means intelligence officials haven't been able to validate the information even though they trust the source who gave it to them.

This particular threat is not unusual, but it's being taken so seriously because it comes days before the 10th anniversary of 9/11, a date al-Qaida has eyed for attack.

Q: How is the intel being analyzed in the latest threat?

A: Right now, teams of analysts are combing through information gleaned from one trusted source, who heard that a small group of attackers, perhaps from Pakistan, might blow up a car bomb in New York or Washington. One or all of the attackers might be from Pakistan. Newly minted al-Qaida leader Ayman al-Zawahri might be behind it.

These analysts are looking for anything to corroborate that report in the reams of information they've gathered tracking travelers to the U.S. from Pakistan. U.S. spies overseas will be going back to their sources to see if anyone has heard the same rumor.

Everything unfolds in a hurry.

"You don't have the luxury of vetting the source and then disseminating the information," said Phillip Mudd, a former top counterterrorist official at the CIA and the FBI. "You have to tell everyone what you heard and then try to prove the information is legitimate."

He said he would be directing analysts to pore over everything that can be gleaned from flight and passport logs of potential foreign suspects who have traveled to the U.S.

"Figuring out who would-be attackers are, or even whether they exist, could take months, where the drumbeat of national security wants answers in minutes or days," Mudd said.

Q: What rules do U.S. intelligence-gatherers have to play by?

A: Looser rules than for most people.

The CIA operates under the U.S. law known as Title 50 — literally a license to break laws in foreign countries, by committing espionage, persuading a local official to commit treason, or in extreme circumstances, to go into a foreign country and target an al-Qaida suspect for killing or capture. Title 50 operations are covert, meaning the U.S. never intends to acknowledge them. Other intelligence agencies, such as the eavesdropping National Security Agency and the new Cyber Command, routinely operate under Title 50 as well.

Q: Ultimately, doesn't it all come down to getting lucky — or unlucky?

A: It can feel that way. There is a favorite expression among intelligence officials, memorably if confusingly uttered by former Defense Secretary Donald H. Rumsfeld, that captures the essence of their work:

"As we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns — the ones we don't know we don't know."

Associated Press writer Eileen Sullivan contributed to this report

## ***Tactical and Strategic Intelligence***

Tactical Intelligence - Intelligence that is required for the planning and conduct of tactical operations. This is in line with military operations being conducted on the battlefield, generally in direct contact with the enemy, the commander's timeframe is very much compressed, and he is dealing with towns, villages, or local tribes. The commander is troubled that an insurgent force may be just over the next hill or hiding in a building waiting to ambush his forces. He is operating in the here-and-now-in-your-face cultural environment. There is no room for error!

Strategic Intelligence - Intelligence that is required for forming policy and military plans at national and international levels. This is in line with more of an expanded timeframe and takes into consideration entire countries. The intelligence analysis may run months or years into the future. During this period, errors, which are not acceptable but do still occur, are not as critical as they are at the tactical level where life and death are daily concerns. Errors at this level can be corrected with the luxury of more room for maneuver.

## ***Components of Strategic Intelligence***

The same analytical process that takes place at the strategic level can be applied at the tactical level. The tactical commander is faced with the same issues albeit at a smaller scale. Policy makers at national level worry about Iranian and North Korean WMDs but the ground commander also worries about insurgent WTDs (weapons of troop destruction) that include but are not limited to RPGs, AKs, IEDs, suicide bombers, etc. Strategic intelligence and tactical intelligence differ primarily in level of application but may also vary in terms and scope of detail.

Information gathered as strategic intelligence may be categorized into eight components. An easy way to remember these components is through the use of the acronym **BEST MAPS**:

### Components of Strategic Intelligence

- ⌚ Biographic
- ⌚ Economic
- ⌚ Sociologic
- ⌚ Transportation And Communications
- ⌚ Military Geography
- ⌚ Armed Forces
- ⌚ Political
- ⌚ Scientific And Technical

Each of these components can further be divided into a number of subcomponents. These components and subcomponents are not all-encompassing nor mutually exclusive. This approach is merely a means to enhance familiarization with the types of information included in strategic intelligence.

#### Biographic Intelligence:

The study of individuals of actual or potential importance, their background and personalities.

- ⌚ Educational And Occupational History
- ⌚ Individual Accomplishments
- ⌚ Idiosyncrasies And Habits
- ⌚ Position, Influence, And Potential
- ⌚ Attitudes And Hobbies

#### Economic Intelligence:

The science of production, distribution, and use of wealth-- the material means of satisfying human desires. Economic intelligence is intelligence which deals with the extent and utilization of the natural and human resources and the economic potential of nations.

- ⌚ Economic Warfare
- ⌚ Economic Vulnerability
- ⌚ Manufacturing
- ⌚ Sources Of Economic Capability

Sociological Intelligence:

The study of society, as well as the groups within society, their composition, organization, purposes and habits, and the role of the individual in relation to social institutions.

- ⌚ Population, Manpower And Labor
- ⌚ Cultural, Physical Characteristics Of People
- ⌚ Public Opinion
- ⌚ Education
- ⌚ Religion
- ⌚ Public Health And Welfare

Transportation and Telecommunications Intelligence:

Transportation Intelligence:

Concerned with the operation and facilities of transportation systems in foreign countries.

Telecommunications Intelligence:

Concerned with the operation and facilities of civil and fixed military communications systems in foreign countries.

- Transportation
- Railways
  - Highways
  - Inland Waterways
  - Petroleum Pipelines
  - Ports
  - Merchant Marine
  - Aviation

- Telecommunications
- Radio
  - Television
  - Telephone
  - Telegraph
  - Submarine Cable
  - Related Comms
  - Media

Military Geography:

Geography is the science of the description of the land, sea and air, and the distribution of plant and animal life, including man and his industries.

Military geographical intelligence is the military evaluation of all geographical factors which may in any way influence military operations.

- ⌚ Description
- ⌚ Natural Features
- ⌚ Manmade Features
- ⌚ Sub-Component Name
- ⌚ Physical Geography
- ⌚ Human And Cultural Geography

Armed Forces Intelligence:

Is the integrated study of the organized land, sea, and air forces, both actual and potential, of foreign nations.

Strategy: Strategic military problems of the nation in light of position, terrain, economic, political, and other factors.

Tactics: Employment of weapons, employment and operations of the various arms and services, special operations training.

Category: Order of battle - equipment - logistics - organization/administration - military manpower

Political Intelligence:

Political intelligence is intelligence concerning foreign and domestic policies of governments and the activities of political movements.

- ⌚ Basic Principles Of Government/National Policies
- ⌚ Government Structure
- ⌚ Foreign Policy
- ⌚ Political Organizations And Parties
- ⌚ Pressure Groups
- ⌚ Electoral Procedures
- ⌚ Public Order And Safety
- ⌚ Subversion
- ⌚ Intelligence And Security Organization
- ⌚ Propaganda

Scientific And Technical Intelligence:

Is the study and evaluation of a foreign countries scientific and technical capability and potential to supports its objective through the development of new weapons and new equipment.

- ⌚ New Weapons And Equipment
- ⌚ Missiles And Space
- ⌚ Nuclear, Biological, And Chemical
- ⌚ Basic And Applied Science

Overt Collection Responsibilities:

- ⌚ Dept. Of State: Political, Sociological, Economic, Scientific And Technical.
- ⌚ Dept. Of Defense: Military intelligence information (also scientific/technical and economic pertinent to DoD missions).
- ⌚ CIA: Exploitation of domestic sources of foreign intelligence; monitoring of foreign radio broadcasts

## THE INTELLIGENCE COMMUNITY

### MISSION AND AUTHORITIES OF THE DIRECTOR OF NATIONAL INTELLIGENCE (DNI)

The Director of National Intelligence (DNI) serves as the head of the Intelligence Community (IC), overseeing and directing the implementation of the National Intelligence Program (NIP) and acting as the principal advisor to the President, the National Security Council, and the Homeland Security Council for intelligence matters. Working together with the Principal Deputy DNI (PDDNI) and with the assistance of Mission Managers and four Deputy Directors, the Office of the Director of National Intelligence's goal is to protect and defend American lives and interests through effective intelligence.

## THE INTELLIGENCE CYCLE

Equally important to the components of strategic intelligence is an awareness of the strategic intelligence cycle and the debriefer's role within that cycle. The first step is the identification of intelligence gaps. Analysts translate these gaps into intelligence requirements - the second step. In the third step, the strategic debriefer fulfills those requirements. The fourth step involves preparation of an intelligence report. The fifth and last step is the preparation of an intelligence report evaluation by the originator of the requirement. These evaluations measure the quality of the information as well as the quality of the report writing.

The Intelligence Cycle is the process of developing raw information into finished intelligence for policymakers to use in decisionmaking and action. There are five steps which constitute the Intelligence Cycle.

### 1. Planning and Direction

... is management of the entire effort, from identifying the need for data to delivering an intelligence product to a consumer. It is the beginning and the end of the cycle—the beginning because it involves drawing up specific collection requirements and the end because finished intelligence, which supports policy decisions, generates new requirements.

The whole process depends on guidance from public officials. Policymakers—the President, his aides, the National Security Council, and other major departments and agencies of government—initiate requests for intelligence.

### 2. Collection

... is the gathering of the raw information needed to produce finished intelligence. There are many sources of information, including open sources such as foreign broadcasts, newspapers, periodicals, and books. Open source reporting is integral to CIA's analytical capabilities. There are also secret sources of information. CIA operations officers collect such information from agents abroad and from defectors who provide information obtainable in no other way.

Finally, technical collection—electronics and satellite photography—plays an indispensable role in modern intelligence, such as monitoring arms control agreements and providing direct support to military forces.

### 3. Processing

... involves converting the vast amount of information collected to a form usable by analysts. This is done through a variety of methods including decryption, language translations, and data reduction.

### 4. All-Source Analysis and Production

... is the conversion of basic information into finished intelligence. It includes integrating, evaluating, and analyzing all available data—which is often fragmented and even contradictory—and preparing intelligence products. Analysts, who are subject-matter specialists, consider the information's reliability, validity, and relevance. They integrate data into a coherent whole, put the evaluated information in context, and produce finished intelligence that includes assessments of events and judgments about the implications of the information for the United States.

The CIA devotes the bulk of its resources to providing strategic intelligence to policymakers. It performs this important function by monitoring events, warning decisionmakers about threats to the United States, and forecasting developments. The subjects involved may concern different regions, problems, or personalities in various contexts—political, geographic, economic, military, scientific, or biographic. Current events, capabilities, and future trends are examined.

The CIA produces numerous written reports, which may be brief—one page or less—or lengthy studies. They may involve current intelligence, which is of immediate importance, or long-range assessments. The Agency presents some finished intelligence in oral briefings. The CIA also participates in the drafting and production of National Intelligence Estimates, which reflect the collective judgments of the Intelligence Community.

##### 5. Dissemination

The last step, which logically feeds into the first, is the distribution of the finished intelligence to the consumers, the same policymakers whose needs initiated the intelligence requirements. Finished intelligence is provided daily to the President and key national security advisers. The policymakers, the recipients of finished intelligence, then make decisions based on the information, and these decisions may lead to the levying of more requirements, thus triggering the Intelligence Cycle.

## MiningThe Internet For Intelligence

**MARCH 6, 2010**

### **HOW MUCH DATA IS GENERATED ON INTERNET EVERY YEAR/MONTH/DAY?**

According to Neilson Online currently there are more than 1,733,993,741 internet users. How much data are these users generating ?

**Few numbers to understand how much data is generated every year.**

#### **Email**

- \* 90 trillion – The number of emails sent on the Internet in 2009.
- \* 247 billion – Average number of email messages per day.
- \* 1.4 billion – The number of email users worldwide.
- \* 100 million – New email users since the year before.
- \* 81% – The percentage of emails that were spam.
- \* 92% – Peak spam levels late in the year.
- \* 24% – Increase in spam since last year.
- \* 200 billion – The number of spam emails per day (assuming 81% are spam).

#### **Websites**

- \* 234 million – The number of websites as of December 2009.
- \* 47 million – Added websites in 2009.

#### **Web servers**

- \* 13.9% – The growth of Apache websites in 2009.
- \* -22.1% – The growth of IIS websites in 2009.
- \* 35.0% – The growth of Google GFE websites in 2009.
- \* 384.4% – The growth of Nginx websites in 2009.
- \* -72.4% – The growth of Lighttpd websites in 2009.

#### **Domain names**

- \* 81.8 million – .COM domain names at the end of 2009.
- \* 12.3 million – .NET domain names at the end of 2009.
- \* 7.8 million – .ORG domain names at the end of 2009.
- \* 76.3 million – The number of country code top-level domains (e.g. .CN, .UK, .DE, etc.).
- \* 187 million – The number of domain names across all top-level domains (October 2009).
- \* 8% – The increase in domain names since the year before.

#### **Internet users**

- \* 1.73 billion – Internet users worldwide (September 2009).
- \* 18% – Increase in Internet users since the previous year.
- \* 738,257,230 – Internet users in Asia.
- \* 418,029,796 – Internet users in Europe.
- \* 252,908,000 – Internet users in North America.
- \* 179,031,479 – Internet users in Latin America / Caribbean.
- \* 67,371,700 – Internet users in Africa.
- \* 57,425,046 – Internet users in the Middle East.
- \* 20,970,490 – Internet users in Oceania / Australia.

#### **Social media**

- \* 126 million – The number of blogs on the Internet (as tracked by BlogPulse).
- \* 84% – Percent of social network sites with more women than men.
- \* 27.3 million – Number of tweets on Twitter per day (November, 2009)
- \* 57% – Percentage of Twitter's user base located in the United States.
- \* 4.25 million – People following @aplusk (Ashton Kutcher, Twitter's most followed user).
- \* 350 million – People on Facebook.
- \* 50% – Percentage of Facebook users that log in every day.
- \* 500,000 – The number of active Facebook applications.

#### **Images**

- \* 4 billion – Photos hosted by Flickr (October 2009).
- \* 2.5 billion – Photos uploaded each month to Facebook.
- \* 30 billion – At the current rate, the number of photos uploaded to Facebook per year.

### **Videos**

- \* 1 billion – The total number of videos YouTube serves in one day.
- \* 12.2 billion – Videos viewed per month on YouTube in the US (November 2009).
- \* 924 million – Videos viewed per month on Hulu in the US (November 2009).
- \* 182 – The number of online videos the average Internet user watches in a month (USA).
- \* 82% – Percentage of Internet users that view videos online (USA).
- \* 39.4% – YouTube online video market share (USA).
- \* 81.9% – Percentage of embedded videos on blogs that are YouTube videos.

### **Web browsers**

- \* 62.7% – Internet Explorer
- \* 24.6% – Firefox
- \* 4.6% – Chrome
- \* 4.5% – Safari
- \* 2.4% – Opera
- \* 1.2% – Other

### **Malicious software**

- \* 148,000 – New zombie computers created per day (used in botnets for sending spam, etc.)
  - \* 2.6 million – Amount of malicious code threats at the start of 2009 (viruses, trojans, etc.)
  - \* 921,143 – The number of new malicious code signatures added by Symantec in Q4 2009.
- (Source: <http://hadoop-karma.blogspot.com/2010/03/how-much-data-is-generated-on-internet.html>)

## Megabytes, Gigabytes, Terabytes... What Are They?

These terms are usually used in the world of computing to describe disk space, or data storage space, and system memory. For instance, just a few years ago we were describing hard drive space using the term Megabytes. Today, Gigabytes is the most common term being used to describe the size of a hard drive. In the not so distant future, Terabyte will be a common term. But what are they? This is where it gets quite confusing because there are at least three accepted definitions of each term.

According to the IBM Dictionary of computing, when used to describe disk storage capacity, a megabyte is 1,000,000 bytes in decimal notation. But when the term megabyte is used for real and virtual storage, and channel volume, 2 to the 20th power or 1,048,576 bytes is the appropriate notation. According to the Microsoft Press Computer Dictionary, a megabyte means either 1,000,000 bytes or 1,048,576 bytes. According to Eric S. Raymond in The New Hacker's Dictionary, a megabyte is always 1,048,576 bytes on the argument that bytes should naturally be computed in powers of two. So which definition do most people conform to?

When referring to a megabyte for disk storage, the hard drive manufacturers use the standard that a megabyte is 1,000,000 bytes. This means that when you buy an 80 Gigabyte Hard drive you will get a total of 80,000,000,000 bytes of available storage. This is where it gets confusing because Windows uses the 1,048,576 byte rule so when you look at the Windows drive properties an 80 Gigabyte drive will report a capacity of 74.56 Gigabytes and a 250 Gigabyte drive will only yield 232 Gigabytes of available storage space. Anybody confused yet? With three accepted definitions, there will always be some confusion so I will try to simplify the definitions a little.

The 1000 can be replaced with 1024 and still be correct using the other acceptable standards. Both of these standards are correct depending on what type of storage you are referring.

### Processor or Virtual Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1024 Bytes = 1 Kilobyte
- 1024 Kilobytes = 1 Megabyte
- 1024 Megabytes = 1 Gigabyte
- 1024 Gigabytes = 1 Terabyte
- 1024 Terabytes = 1 Petabyte
- 1024 Petabytes = 1 Exabyte
- 1024 Exabytes = 1 Zettabyte
- 1024 Zettabytes = 1 Yottabyte
- 1024 Yottabytes = 1 Brontobyte
- 1024 Brontobytes = 1 Geopbyte

### Disk Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1000 Bytes = 1 Kilobyte
- 1000 Kilobytes = 1 Megabyte
- 1000 Megabytes = 1 Gigabyte
- 1000 Gigabytes = 1 Terabyte
- 1000 Terabytes = 1 Petabyte
- 1000 Petabytes = 1 Exabyte
- 1000 Exabytes = 1 Zettabyte
- 1000 Zettabytes = 1 Yottabyte
- 1000 Yottabytes = 1 Brontobyte
- 1000 Brontobytes = 1 Geopbyte

This is based on the IBM Dictionary of computing method to describe disk storage - the simplest.

**Source:** <http://www.whatsabyte.com/>

Now let's go into a little more detail.

**Bit:** A Bit is the smallest unit of data that a computer uses. It can be used to represent two states of information, such as Yes or No.

**Byte:** A Byte is equal to 8 Bits. A Byte can represent 256 states of information, for example, numbers or a combination of numbers and letters. 1 Byte could be equal to one character. 10 Bytes could be equal to a word. 100 Bytes would equal an average sentence.

**Kilobyte:** A Kilobyte is approximately 1,000 Bytes, actually 1,024 Bytes depending on which definition is used. 1 Kilobyte would be equal to this paragraph you are reading, whereas 100 Kilobytes would equal an entire page.

**Megabyte:** A Megabyte is approximately 1,000 Kilobytes. In the early days of computing, a Megabyte was considered to be a large amount of data. These days with a 500 Gigabyte hard drive on a computer being common, a Megabyte doesn't seem like much anymore. One of those old 3-1/2 inch floppy disks can hold 1.44 Megabytes or the equivalent of a small book. 100 Megabytes might hold a couple volumes of Encyclopedias. 600 Megabytes is about the amount of data that will fit on a CD-ROM disk.

**Gigabyte:** A Gigabyte is approximately 1,000 Megabytes. A Gigabyte is still a very common term used these days when referring to disk space or drive storage. 1 Gigabyte of data is almost twice the amount of data that a CD-ROM can hold. But it's about one thousand times the capacity of a 3-1/2 floppy disk. 1 Gigabyte could hold the contents of about 10 yards of books on a shelf. 100 Gigabytes could hold the entire library floor of academic journals.

**Terabyte:** A Terabyte is approximately one trillion bytes, or 1,000 Gigabytes. There was a time that I never thought I would see a 1 Terabyte hard drive, now one and two terabyte drives are the normal specs for many new computers. To put it in some perspective, a Terabyte could hold about 3.6 million 300 Kilobyte images or maybe about 300 hours of good quality video. A Terabyte could hold 1,000 copies of the Encyclopedia Britannica. Ten Terabytes could hold the printed collection of the Library of Congress. That's a lot of data.

**Petabyte:** A Petabyte is approximately 1,000 Terabytes or one million Gigabytes. It's hard to visualize what a Petabyte could hold. 1 Petabyte could hold approximately 20 million 4-door filing cabinets full of text. It could hold 500 billion pages of standard printed text. It would take about 500 million floppy disks to store the same amount of data.

**Exabyte:** An Exabyte is approximately 1,000 Petabytes. Another way to look at it is that an Exabyte is approximately one quintillion bytes or one billion Gigabytes. There is not much to compare an Exabyte to. It has been said that 5 Exabytes would be equal to all of the words ever spoken by mankind.

**Zettabyte:** A Zettabyte is approximately 1,000 Exabytes. There is nothing to compare a Zettabyte to but to say that it would take a whole lot of ones and zeroes to fill it up.

**Yottabyte:** A Yottabyte is approximately 1,000 Zettabytes. It would take approximately 11 trillion years to download a Yottabyte file from the Internet using high-power broadband. You can compare it to the World Wide Web as the entire Internet almost takes up about a Yottabyte.

**Brontobyte:** A Brontobyte is (you guessed it) approximately 1,000 Yottabytes. The only thing there is to say about a Brontobyte is that it is a 1 followed by 27 zeroes!

**Geopbyte:** A Geopbyte is about 1000 Brontobytes! Not sure why this term was created. I'm doubting that anyone alive today will ever see a Geopbyte hard drive. One way of looking at a geopbyte is 15267 6504600 2283229 4012496 7031205 376 bytes!

Now you should have a good understanding of megabytes, gigabytes, terabytes and everything in between. Now if we can just figure out what a WhatsAByte is.....:)

### ***DATA IS ABUNDANT, INFORMATION IS USEFUL, KNOWLEDGE IS PRECIOUS.***

**Data.** – Data is raw and it's abundant. It simply exists and has no significance beyond its existence . It can exist in any form, usable or not. It does not have meaning of itself. Collecting users activity log will produces data.

**Information.** – Information is data that has been given meaning by way of relational connection.

**Knowledge.** - Knowledge is the appropriate collection of information, such that its intent is to be useful.

Internet users are generating petabytes of data every day. Millions of users access billions of web pages every millisecond, creating hundreds of server logs with every keystroke and mouse click. Having only user log data is not useful. To give better service to user and generate money for business it is required to process raw data and collect information which can be used for providing knowledge to users and advertisers. **Source:** <http://www.whatsabyte.com/>

Based on these figures, I opine that intelligence exists out there just waiting to be tapped. Oh, come on now, you do have search engines to help research that data; it's only 8 zetabytes! Lots of data but guess what, even Google which is considered currently the best search engine, has only indexed about 170 terabytes. Now you know why I recommend using more than one search engine with good keywords to assist.

## **Key Army Access Sites**

NOTE: Several links require password access.

To access Intelink or to apply for a remote access account, go to <https://www.intelink.gov>  
The good thing about Intelink is that you can apply for a non-attributable so that very little electronic footprints are left behind.

### **US Army Intelligence Center Mission:**

The United States Army Intelligence Center's mission is Leading, Training, Equipping and Supporting the world's premier corps of Military Intelligence Professionals who are imbued with a warrior spirit, self-discipline and mutual respect.

### **The 304th Military Intelligence Battalion's Mission:**

<https://www.ikn.army.mil/apps/iknwms/default.aspx?webId=2166>

The 304th Military Intelligence Battalion's Mission The 304th Military Intelligence Battalion conducts Soldier and Leader training; instilling the Tenets of Leadership, a Warrior Ethos, and the Army Values in order to produce MI professionals who can conduct and lead Military Intelligence operations in an Army or Joint-Interagency-Intergovernmental-Multinational (JIIM) environment. 304th MI BN - Leaders of the Corps! The 304th Military Intelligence Battalion is located in Fort Huachuca, Arizona and is a subordinate unit of the 111th Military Intelligence Brigade.

### **Intelligence Knowledge Network (IKN):**

<https://www.ikn.army.mil/>

IKN is a Knowledge Management tool and dynamic portal that enables Intelligence Soldiers all over the world to communicate, collaborate and investigate. IKN serves as the Intelligence Warfighter Forum and hosts discussion forums, a single point of entry to access Intelligence Community websites, and provides a variety of public and private web applications that support the Intelligence Community and the Warfighter.

## **Aviation**

Airport & Aviation Security

<http://www.ict.org.il/Articles/tabid/66/ArticleId/1105/currentpage/1/Default.aspx>

Track Planes in Real-Time with Google Maps (we just continue to make it easier for terrorists like Al Qaeda to shoot down an aircraft. Aircraft and airports are very secure and getting inside poses a high degree of risk, however, shooting down an aircraft away from the terminal would make a statement that aviation still is not that safe.)

## ***BLOGS***

By David F. Carr DOD: Be wary of social media's 'loose lips'

In an earlier era, "loose lips sink ships" was the military's warning not to let even small details about military movements and operations slip in casual conversation. In contrast, social media Web sites today thrive on loose lips, making it even tougher to maintain operational security. Even the smallest details shared on social media sites can play a role in security breaches.

WASHINGTON — Everyone from troops in the field to the highest brass and civilian leaders will be allowed to Twitter, blog and use Facebook and other social networking sites on the military's non-classified computer network, the Pentagon has announced.

The new policy follows a seven-month review in which the Defense Department weighed the threats and benefits of allowing the wide use of emerging Internet capabilities. It essentially seeks to manage the risks while acknowledging the Internet is proving a powerful tool for a myriad of tasks including recruiting, public relations, collaboration with a wide range of people and for communications between troops and their families.

To guard security, it allows commanders to cut off access – on a temporary basis only – if that's required to safeguard a mission or reserve bandwidth for official use. The new directive also makes practices uniform across the entire department, in which different commands previously blocked certain things while others didn't. Visiting sites for pornography, gambling or hate-crime activities is still prohibited on military computers.

"We need to take advantage of these capabilities that are out there – this Web 2.0 phenomena," said David M. Wennergren, deputy assistant secretary of defense for information technology. "The idea is be responsible and use these tools to help get the job done."

The new directive means that YouTube, MySpace and more than a dozen sites blocked by the Pentagon in May 2007 will be unblocked, he said. The Pentagon said at the time that the use of video sites in particular was straining its network and using too much of its bandwidth. But Wennergren said Friday that the move failed to stem the use of bandwidth because people just went to alternate sites.

<http://www.few.com/Articles/2009/06/22/Operational-Security-Presentation.aspx>

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them.

Google Blog Search

<http://blogsearch.google.com/>

**World Blogs** (One of the Web's largest and most comprehensive directories of World Blogs, sorted by country and region.)

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. Personally, I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them. Be careful how you use them. Once you post information to a Blog it is basically there forever.

**Africa**

## Bomb Threat Stand-Off Distances

Chart

[http://www.nctc.gov/docs/2006\\_calendar\\_bomb\\_stand\\_chart.pdf](http://www.nctc.gov/docs/2006_calendar_bomb_stand_chart.pdf)

UNCLASSIFIED

### Bomb Threat Stand-Off Distances

Threat Description	Explosives Capacity <sup>1</sup> (TNT Equivalent)	Building Evacuation Distance <sup>2</sup>	Outdoor Evacuation Distance <sup>3</sup>
Pipe Bomb	5 LBS/ 2.3 KG	70 FT/ 21 M	850 FT/ 259 M
Briefcase/ Suitcase Bomb	50 LBS/ 23 KG	150 FT/ 46 M	1,850 FT/ 564 M
Compact Sedan	500 LBS/ 227 KG	320 FT/ 98 M	1,500 FT/ 457 M
Sedan	1,000 LBS/ 454 KG	400 FT/ 122 M	1,750 FT/ 533 M
Passenger/ Cargo Van	4,000 LBS/ 1,814 KG	600 FT/ 183 M	2,750 FT/ 838 M
Small Moving Van/ Delivery Truck	10,000 LBS/ 4,536 KG	860 FT/ 262 M	3,750 FT/ 1,143 M
Moving Van/ Water Truck	30,000 LBS/ 13,608 KG	1,240 FT/ 378 M	6,500 FT/ 1,981 M
Semi-Trailer	60,000 LBS/ 27,216 KG	1,500 FT/ 457 M	7,000 FT/ 2,134 M

This table is for general emergency planning only. A given building's vulnerability to explosions depends on its construction and composition. The data in these tables may not accurately reflect these variables. Some risk will remain for any persons closer than the Outdoor Evacuation Distance.

## **CAMS Around the World**

(why would CAMS be included in this handout? Imagine being told you have to deploy to a certain country to conduct an operation. You are told the weather is 40 degrees with a heavy overcast and it is drizzling. You can only imagine an image of what it looks like. However, with a weather cam of the area the image is vivid and in real time. Most major cities around the world have cams showing certain parts of the city which can be very helpful when planning an operation. They can show areas to avoid and roads that support your equipment.)

NationMaster (Welcome to NationMaster, a massive central data source and a handy way to graphically compare nations. NationMaster is a vast compilation of data from such sources as the CIA World Factbook, UN, and OECD. You can generate maps and graphs on all kinds of statistics with ease.) We want to be the web's one-stop resource for country statistics on everything from soldiers to wall plug voltages.	<a href="http://www.nationmaster.com/index.php">http://www.nationmaster.com/index.php</a>
StateMaster (A unique statistical database which allows you to research and compare a multitude of different data on US states. We have compiled information from various primary sources such as the US Census Bureau, the FBI, and the National Center for Educational Statistics. More than just a mere collection of various data, StateMaster goes beyond the numbers to provide you with visualization technology like pie charts, maps, graphs and scatterplots. We also have thousands of map and flag images, state profiles, and correlations.) We have stats on everything from toothless residents to percentage of carpoolers. Our database is increasing all the time, so be sure to check back with us regularly.	<a href="http://www.statemaster.com/index.php">http://www.statemaster.com/index.php</a>

### ***Critical Thinking***

This free web-based training is provided as an introduction to Anacapa's scheduled and on-site courses in **intelligence analysis**. Upon completion of all three training modules, you may obtain a certificate of completion. Click on a link below to go to each module.

Essentials Of Critical Thinking

[http://www.free-ed.net/free-ed/TextResources/critThink\\_01.asp](http://www.free-ed.net/free-ed/TextResources/critThink_01.asp)

#### **1. Critical Thinking Basics**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

#### **2. The Anatomy and Varieties of Arguments**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[Multiple-Choice Quiz](#)

#### **3. Clear Thinking, Critical Thinking, and Clear Writing**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

#### **4. Credibility**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 5. Persuasion through Rhetoric: Common Devices and Techniques

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 6. More Rhetorical Devices: Psychological and Related Fallacies

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[Multiple-Choice Quiz](#)

## 7. More Fallacies

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 8. Deductive Arguments I: Categorical Logic Categorical Claims

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 9. Deductive Arguments II: Truth-Functional Logic

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)

[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 10. Inductive Arguments Analogical Arguments

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 11. Causal Arguments

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 12. Moral, Legal, and Aesthetic Reasoning

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

Frontline: CyberWar (How real is the threat of war in cyberspace, and what does the White House know that the rest of us don't? FRONTLINE investigates a new war using embedded malicious code, probes and pings, and other weapons aimed directly at America's power grid, water supply, and transportation systems. Examples include The Slammer (Super Bowl Sunday), Nimda (a week after 9/11), Code Red (summer 2001), and Moonlight Maze (from Russia's Academy of Science). View the entire 52 minute program here in six consecutive chapters.)

## ***Department of Homeland Security***

The Department of Homeland Security Open Source Enterprise (DHS-OSE) has just released two new daily Open Source products to the Homeland Security Central website on Intelink-U (<https://www.intelink.gov/hls>) and the Homeland Security Information Network-Intelligence (<https://hsin-intel.dhs.gov/>).

With the large success of the DHS Daily Cyber Report, the DHS-OSE has started reporting open source information on medical and health related hazards, as well as human smuggling and trafficking. Respectively, these new open source products are titled: DHS Daily Infectious Diseases Report & DHS Daily Human Trafficking Report.

Listed below is a short description of each:

- The DHS Daily Infectious Diseases Report is collected each weekday as a summary of medical and health related hazards published from open-source information concerning the homeland.
- The DHS Daily Human Trafficking Report is collected each weekday as a summary of human smuggling/trafficking related open-source information.

Each of these new products along with the Daily Cyber Report are available for PDF download at the above secure web addresses and are available via unclassified e-mail subscription. There are also several other new open source reports to be released that focus on:

- Drug Trafficking,
- Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE),
- Illicit Commercial Trafficking, and
- Weapons Trafficking

These DHS-OSE open source products originate from Internet sources and open source information. They are unclassified products that can be widely distributed. Point of contact is Tom Link at [thomas.link@dhs.gov](mailto:thomas.link@dhs.gov) or [tom.link@ugov.gov](mailto:tom.link@ugov.gov)

## ***Drugs and Terrorism, Drug Cartels, And Criminal Organizations***

At least seven major Mexican Drug Trafficking Organizations (DTOs) are primarily responsible for the \$39 billion drug trade that floods narcotics across the U.S.-Mexico border. These opportunistic cartels form loose alliances that are only as strong as the narcotics proceeds fueling them. The DEA refers to several as "poly drug" organizations because they traffic cocaine, marijuana, heroin, and meth.

Here's a guide to the most active, and largest, cartels:

**Mexican Federation (Sinaloa Cartel):** The Sinaloa Federation, which is also known as the Pacific Cartel or Golden Triangle Alliance, was formed in the 1970s by Mexico's four major crime syndicates. By the 1990s, the cartel had grown to the size of the Colombian Medellin Cartel in its heyday and, in 2008, apparently split into several warring factions, including the Beltran-Leyva Organization. The Federation directs a large-scale transportation network for various narcotics, including shipping multi-ton quantities of cocaine from South America. Joaquin "El Chapo" Guzman Loera has been leading the cartel since 1995.

**Arellano-Felix Organization (Tijuana Cartel):** Seven brothers and four sisters inherited the cartel from Miguel Angel Felix Gallardo, who was jailed in 1989 for the kidnapping and murder of DEA agent Enrique "Kike" Camarena Salazar, among other crimes. Earlier this year, current leaders Teodoro "El Teo" Garcia Simental, Raydel "El Muletas" Lopez Uriarte, and brother Manuel were arrested.

**Carrillo-Fuentes DTO (Juarez Cartel):** Since the early 1990s, this cartel has controlled the smuggling corridor from Juarez-El Paso southeast to Ojinaga, Chihuahua, using extreme violence and intimidation. After the death of founder Amado Carrillo Fuentes in a Mexican hospital as a result of botched plastic surgery, brother and current leader Vicente took over. The cartel has been battling the Sinaloa Cartel, and relies on the Barrio Azteca gang in El Paso, Dallas, and Austin to distribute cocaine.

**Gulf Cartel:** The cartel's primary areas of operation include Nuevo Laredo, Miguel Aleman, Reynosa, and Matamoros in the Mexican state of Tamaulipas. The poly drug Gulf Cartel also operates in Nuevo Leon and Michoacan and is the primary supplier of the Atlanta area.

**Los Zetas Cartel:** As the one-time enforcers for the Gulf Cartel, the paramilitary Zetas are one of the most powerful and violent cartels in Mexico. The cartel was formed when Gulf hired a small group of deserters from the Mexican Army Special Forces that may have received counter-insurgency training at Fort Benning, Ga. The group split off and created its own cartel in early 2010.

**La Familia Michoacana Cartel:** This unique cartel, which achieved the federal government's Kingpin Designation Act list in April 2009, began in 2004 as armed vigilantes who portrayed themselves as crime fighters, stating their goal of eradicating meth. The group's practice of placing poorly spelled notes near the decapitated heads of rivals (especially in Uruapan) is part of its propaganda campaign. The cartel exhibits religious tendencies and cult-like behavior, requiring members to join group prayer sessions and wear La Familia logos. The group now produces meth in hilly Michoacan and intelligence officials believe it pays millions a month in bribe money to politicians.

**Beltran-Leyva Organization:** In 2008, Arturo Beltran Leyva separated from the Sinaloa Cartel and now transports multi-ton quantities of cocaine and marijuana into Arizona, California, Illinois, New York, and Texas.

## **Drug Smuggling Techniques/Methods**

You can hide drugs up your anus or vagina but a good customs agent will find them if they're suspicious. There are also experts who make a living packing suitcases and rucksacks. It is possible to do it in a way that doesn't show up on x-rays and that feels genuinely like part of the baggage. It's an acquired skill however and the customs boys know exactly what to look for. Another popular method is to buy platform shoes and cut out a space in the heels. This is hardly original but if you decide to try this please at least get used to wearing the things first. You'll look a little conspicuous overbalancing as you walk through the airport.

Narco Subs

<http://insightcrime.org/insight-latest-news/item/1618-colombia-seizes-2-narco-submarines-in-a-week>

Cocaine Submarines – Great video by National Geographic on cocaine submarines.

[http://www.documentarytube.com/cocaine-submarines?utm\\_source=feedburner&utm\\_medium=twitter&utm\\_campaign=Feed%3A+DocumentaryTube+%28Documentary+Tube%29](http://www.documentarytube.com/cocaine-submarines?utm_source=feedburner&utm_medium=twitter&utm_campaign=Feed%3A+DocumentaryTube+%28Documentary+Tube%29)

Colombian traffickers are using a new secret weapon smuggling cocaine north – drug submarines. Up to 30 meters long and almost impossible to detect, are capable of delivering several tons of cocaine in one shipment. Dozens of submarines are believed to be operating between the coasts of Colombia and Mexico, and police estimate that another 70 will be built next year alone. NGC is U.S. Drug Enforcement Agency and the Colombian military agents in search of drug submarine construction in some of the most remote jungles of the planet. Here, where the malaria-infested mosquitoes swarm narco-generals and heavy hand of the local population, there are at least 300 known cocaine laboratories and finished countless drug submarines and their factories. In hard-fought war against drug trafficking, an estimated catch comes in: a surprisingly sophisticated sub built by hand in the jungle.

## Mexican Drug Cartels Reach Into The U.S.

Mexico Under Seige: The Drug War at Our Doorstep <http://projects.latimes.com/mexico-drug-war/#/its-a-war>

*Maps are interactive hyperlinked*

### MEXICAN DRUG CARTELS' REACH EXTENDING FAR BEYOND BORDER

Mexican drug-trafficking organizations have distribution hubs in more than 200 U.S. cities, according to the Justice Department's National Drug Enforcement Center.

Sources: U.S. Department of Justice; Congressional Research Service; Stratfor

AP

#### Areas of cartel influence and dispute

## Drug cartels moving into the US

- Cities where Mexican cartels and their affiliates maintain drug distribution networks or supply drugs to distributors as of April 2008.

**Feb. 25, 2009**

Federal officials announce the arrest of more than 750 people as part of a 21-month investigation that targeted 70 distribution cells of the Sinaloa Cartel in more than 26 states, from Washington to Massachusetts.

**Sept. 16-17, 2008**

More than 160 people said to be members of the Gulf Cartel are arrested nationwide, including 43 in Atlanta. Officials label the city a "major drug distribution center for the Southeast and beyond."

Seized by U.S. along the southwest border in 2007

### MARIJUANA

**3,232,691 lbs.**

Flow from Mexico has remained high despite the recent crackdown. Cartels also produce marijuana in public lands in the western United States.

### COCAINE

**21,986 lbs.**

About 90 percent of the cocaine entering the United States from South America comes through Mexico, but availability has decreased here since 2006.

### METHAMPHETAMINE

**3,765 lbs.**

Flow decreased due to import restrictions of ephedrine and pseudoephedrine in Mexico, but some cartels have relocated production to California.

### HEROIN

**795 lbs.**

A production rise in Mexico and a decrease in Colombia allowed cartels to expand heroin distribution in eastern United States in 2007.

## Mexico's Drug Killings

[http://online.wsj.com/article/SB10001424052748704288204575362862267177490.html?mod=WSJ\\_hpp\\_LEFTTopStories#project%3DMEXDRUGWARS0912%26articleTabs%3Dinteractive](http://online.wsj.com/article/SB10001424052748704288204575362862267177490.html?mod=WSJ_hpp_LEFTTopStories#project%3DMEXDRUGWARS0912%26articleTabs%3Dinteractive)

### Drug Killings in Mexico (Annual Totals)

2006 Drug Killings by State

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2007 Drug Killings by State

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2008 Drug Killings by State (as of June 27, 2008)

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2008 Drug Killings by State (as of August 29, 2008)

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2008 Drug Killings by State (as of October 31, 2008)

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2008 Drug Killings by State (as of December 26, 2008)

Total Number of Drug Killings [ [image](#) | [methodology](#) ]

Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of February 27, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of May 1, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of July 3, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of August 28, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of October 30, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2009 Drug Killings by State (as of December 31, 2009)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2010 Drug Killings by State (as of April 30, 2010)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2010 Drug Killings by State (as of July 2, 2010)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2010 Drug Killings by State (as of September 3, 2010)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2010 Drug Killings by State (as of November 3, 2010)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

2010 Drug Killings by State (as of December 31, 2010)  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

**Drug Killings in Mexico (Bi-monthly)**

January through February 2008  
Total Number of Drug Killings [ [image](#) | [methodology](#) ]  
Proportion and Percentage of Drug Killings [ [image](#) | [methodology](#) ]

March through April 2008

Interpreting Gangster Clothing

<http://www.policemag.com/Channel/Gangs/PhotoGallery/2010/02/Gangster-Clothing.aspx>

Gangs in The Military (According to the FBI, 15,000 men and women in the U.S. military have ties to notorious American gangs such as MS-13, the Crips, the Bloods, and the Gangster Disciples.)

<http://www.policemag.com/Videos/Channel/Gangs/2011/01/Gangs-In-the-Military-Part-1.aspx>

Gang tattoos are an excellent tool for law enforcement and corrections officers to use to identify known or suspected gang members. This gallery includes examples of tattoos worn by predominantly Hispanic gangs such as the Mexican Mafia, MS-13, and the Latin Kings. The number "13" is used because M (or La Eme) is the thirteenth letter of the alphabet and is used to signify the Mexican Mafia, which uses Sureños—gangs that swear allegiance to the Mexican Mafia—to carry out its orders from prison. <http://www.policemag.com/Channel/Gangs/PhotoGallery/2009/08/Gang-Tattoos-Hispanic.aspx>

Latin King's Gang Signs Video

Flixxy	<a href="http://www.flixxy.com/">http://www.flixxy.com/</a>

[Zoomr](#) : Recent startup that is shaping up to take on Flickr. Have just announced they will be increasing monthly limits on free and paid accounts to more than what Flickr offers.

[Vmix](#) : Founded by the people behind MP3.com, Vmix offers photo and video sharing along with the ability to create your own slideshows. A busy-looking site that seems to have quite a bit of traffic.

[Flickr](#) : The daddy of photo-sharing sites, the first in the breed of web 2.0 photo sites, allows you to create galleries, tag photos etc. The biggest in terms of traffic and was acquired by Yahoo.

[Fotki](#) : Founded in 1998 Fotki has been around for ages in relation to a lot on this list, it offers a range of services such as photo-sharing, photo-printing, photo-selling and blogging.

[Fotolog](#) : Large photo blogging community - claims to have a staggering 1.5 billion page views and receive over 20 million unique visitors per month which is backed up by its alexa ranking of [33](#).

[Fotopic](#) : Another site that has been around a few years; since 1999. Offers gallery services and also prints and your photos on to various gifts within their store.

[Glowfoto](#) : A basic photo sharing site that offers galleries and the option to upload via mobile phone. 25million photos have been uploaded by 73k users so far.

[MyPhotoAlbum](#) : Photo sharing with the usual features and also offers printing; currently offering 15 free prints to new users. Has had 32million photos uploaded so far.

[Panoramio](#) : Photo storage and a mapping feature via a mashup with google maps. Each photo gets linked with the place it was taken. 2GB storage included for free.

[Ringo](#) : No, not the beatle but a rather smart-looking site which combines photo sharing with social networking. Every week you get your friends newest photos and comments delivered to you. One of the better-looking sites.

[Zoomonga](#) : A nice-looking site but the rather stingy 20mb of uploads per month on the free plan could be why it doesn't look exactly busy.

[Webshots](#) : Another huge site owned by Cnet. Provides the usual photo sharing features plus a desktop utility for organising photos, prints on gifts etc.

[Photobucket](#) : The favourite of myspace users, provides free and paid accounts for image hosting and video hosting along with the ability to create a flash slideshow. Have harnessed viral marketing to a tee and provide most of the image hosting for myspace and other social networks.

[PBase](#) : Not the easiest on the eye but seems to have gained huge traffic since it was established in 1999. Very basic features and a huge member's forum.

[OrangePics](#) : A basic site that emphasizes ease of use and safety of your photos. Currently offering your first full year for free, after which is an annual charge of \$24.95.

[Phanfare](#) : Offers unlimited storage for a monthly fee of \$6.95 to host your photos and video clips. Also provides downloadable organisation software.

[SmugMug](#) : Really nicely designed site that offers accounts from \$59.95 per year with a free trial. The user galleries are nice to look at and you can include video in these.

[Dropshots](#) : Front end looks nice and clean and the features are up to scratch but viewing the sample gallery lets the site down - cluttered and ugly.

[Slide](#) : Another site that has taken advantage of myspace to create viral marketing. Users upload photos and create slideshows using the editor and then post them to their profile or blog etc. Controls are nice and easy to use, will do well unless myspace bring out their own slideshow tools.

[Photosite](#) : Provides photo sharing but you get the impression the site is more about selling prints and gifts than that. Looks a touch too corporate although the drag and drop tools sound impressive.

[23HQ](#) : Nice site which provides completely free accounts, basic features such as galleries, tagging and photogroups; where you can form your own community of friends and chat and share each other's photos.

[Kodak Gallery](#) : Goes under the name of a photo sharing site but looks very corporate and set up to flog merchandise rather than provide a nice website experience.

[Zoto](#) : Nice site with good features such as geo-tagging, photo blogging and the usual community features such as browsing by interest. Free version with the option to upgrade to a pro account for \$24.95 per year.

[Snapfish](#) : Another corporate site run by Hewlett Packard, offers photo sharing and digital prints of your snaps.

[Flukiest](#) : Photo, Video and music sharing with the ability to upload via mobile phone or a personalised Flukiest email address.

[Imagestation](#) : Sonys photo sharing offering, much better looking the Kodaks or HPs. Usual features with printing options but also the ability to upload via your psp.

[PictureTrail](#) : Another site that is combining photo sharing and social networking. Provides myspace style customisable profiles and some nice flash widgets to create 3d cubes of your photos, heart shapes, slideshows, screensavers and loads more bits and bobs.

[Hello](#) : Great domain and Googles offering which is designed to work in tandem with their [picasa](#) image organising software which they acquired. Picasa is great piece of software and helps you find pictures you had long forgotten about. it seems that hello allows you to send images to your friends like and instant messenger or to your blogger blog.

[Parazz](#) : Parazz is a nifty looking site which offers drag and drop uploading, slideshow creation with the option to add a soundtrack, camera phone uploads and a colour theme editor. They provide a free version or pro version for \$29 a year.

[Zee](#) : Clean looking site with nice user galleries, offers the choice of uploading via your pc or mac with their software or via mobile phone.

## ***IMINT***

GEOINT Online (A website that is unifying existing NGA web-based capabilities for online, on-demand discovery of and access to geospatial intelligence (GEOINT) content, services, expertise, and support. GEOINT Online is an element of the strategy to transform NGA from solely a product producer to a GEOINT Services Provider with integrated access to GEOINT content, services, expertise and support.)

Type link directly into URL box; clicking will not function <http://www.nogw.com/ilweapons.html>

Despite Israel's refusal to acknowledge its nuclear weapons status, its secret arsenal is an open secret that Israeli policy makers don't go out of their way to deny. From its beginnings in the mid-1960s, Israel's program has developed into one that rivals those of larger powers like France and Britain. Here, based on interviews with U.S. intelligence officials and nuclear experts, is a portrait of Israel's strategic weapons programs. <http://www.sweetliberty.org/issues/israel стратегический/index.shtml>

Click on a symbol or location for more about Israel's secret arsenal.

**SPECIAL REPORT** Mideast endgame: an interactive guide

Israel's Nuclear Facilities [http://www.atomicarchive.com/Almanac/IsraeliFacilities\\_static.shtml](http://www.atomicarchive.com/Almanac/IsraeliFacilities_static.shtml)

The following sites can be found in Google Earth or Bing Maps 3D by copying and pasting the latitudes and longitudes into the search box.

## Negev Nuclear Research Center, Dimona

Negev Nuclear Research Center. Plutonium production and extraction facilities, along with other weapons-related infrastructure.

31.001504°N, 35.146723°E

## Eilabun

Eilabun is Israel's second weapons storage facility. Tactical nuclear shells and land mines are among its contents.

32.760226°N, 35.412077°E

## **Kfar Zekharya**

Suspected nuclear missile base and bomb storage storage facility.

31.766267°N, 34.88142°E

## **Nahal Soreq**

Soreq is the equivalent of the U.S. national weapons laboratories. The lab handles weapons design and construction as well as research.

31.766267°N, 34.88142°E

## **Yodfat**

Suspected nuclear weapons assembly facility.

32.85093°N, 35.27916°E

## **Tirosh**

Reportedly one of two Israeli nuclear weapons storage facilities. It is speculated that that Tirosh is the strategic weapons storage site, while Eilabun is the tactical weapons storage site.

31.751963°N, 34.863524°E

## **Rafael**

Rafael has been responsible for the actual assembly of Israeli nuclear weapons.

32.889534°N, 35.09119°E

COPS <http://cops.usdoj.gov/RIC/ResourceDetail.aspx?RID=573>  
Law Enforcement Intelligence Analysis Digital Library  
<https://sites.google.com/site/lawenforcementintelligence/>

ID This Person is a free website that was recently launched and is now being used in Illinois, Missouri, Tennessee, Kentucky and Ohio. The website is a new tool where law enforcement agencies post images of unknown suspects for the public to view. TIPs are sent via email to law enforcement and rewards are paid to those providing TIPs if they help an agency ID someone. Totally free service with no hidden fees, available to Law Enforcement throughout the US.

AELE Law Enforcement  
Search the Library of Case Summaries (AELE has a free search tool covering more than 30,000 case summaries, since 1975) <http://www.aele.org/htdig/common/search.html>

Espanol For Law Enforcement (Course Goal: To attain a working knowledge of the Spanish language and apply that knowledge to law enforcement situations.) <http://www.espanolforlawenforcement.gov/>

Crime Spider - For almost 10 years Crime Spider has looked for the best crime and law enforcement sites and categorized topics so you don't have to sort through hundreds of sites to find the one that fits the bill. You can easily find the information you want at Crime Spider. Whether you are doing research on criminalistics, forensic anthropology, FBI, unsolved murders, homicide investigation techniques, child abuse, domestic violence, the death penalty, terrorism, criminal justice, law and courts, behavioral profiling, gang violence, juvenile crime, missing persons, serial killers or mass murderers, criminals, police, crime scene photos, we can help you find the crime information you want. We also have tips for people searches and protecting your privacy as well as features on specific topics of interest to crime and law enforcement professionals, such as links to police jobs sites and crime scene investigation supplies. <http://www.crimespider.com/>

World Category User <http://www.worldcat.org/>

In this video you'll learn how to create a List on WorldCat.org and get some good ideas on fun things to do with WorldCat Lists.

<http://www.youtube.com/watch?v=vos5ivBeZ5c>

WorldCat Facebook Application. This Facebook Application gives you access to WorldCat searches and user-created lists from personalized pages within your Facebook account. The application includes a Home screen with WorldCat search box, as well as quick links to WorldCat searches based on topics listed in your Facebook profile as personal interests. The application also includes:

a built-in advanced WorldCat search

a panel that allows you to invite other Facebook friends to install WorldCat

a "Something to Read" panel that displays books recently added to WorldCat lists

a "Favorite WorldCat Lists" panel where you can track your own lists or those of other WorldCat users

## **Mapping and Related Material**

Google Maps Mania

<http://googlemapsmania.blogspot.com/>  
<https://maps.google.com/>

GEOMA

<http://www.nomap.ca/%28S%28wyguiwzserggn55ab2eie55%29%29/Home.aspx>

MashupForge (creation tool that allows anyone to easily create a Google Map without having to use the Google Maps API. The tool allows users to create a Google Map with markers or to create a map from an uploaded image. Adding markers to a Mashupforge map is a simple process of dropping the marker on the correct location and entering the information you wish to appear in the information window. To create a map from an image simply involves uploading an image. The screenshot above shows a map created from one of NASA's Blue Marble monthly images uploaded to Mashupforge. Custom maps created with Mashupforge can be embedded in any website by cutting and pasting the provided iframe code. Alternatively users can just share the link of their created map's URL.) <http://mashupforge.com/>

MapWindow (The MapWindow GIS project includes a free and open source desktop geographic information system (GIS) with an extensible plugin architecture; a GIS ActiveX control; and C# GIS programmer library called DotSpatial.)

<http://www.mapwindow.org/>

<http://www.mapwindow.org/conference/2011/>

Geo Names

<https://www.geonames.org/>

Shaded Relief

<https://www.shadedrelief.com/>

Relief Shading

<http://www.reliefshading.com/>

Where Am I? How to determine latitude and longitude given a street address, city, state, province, territory, country or whatever.

<http://www.hmssurprise.org/Resources/whereami.html>

<http://www.ajmsoft.com/geocode.php>

<http://stevemorse.org/cal/latlon.php>

Tactical Digital Hologram (This map with use of a flashlight or other light source brings out a 3D image of the terrain)

<http://www.peostri.army.mil/PRODUCTS/TDH/>

Free Relief Maps for Google Maps  
(Maps-For-Free has produced a nice Google Maps application that lets you view a number of relief map layers. Not only can you use the application to view the relief maps you can add them to your own Google Maps. Maps-For-Free offers free relief maps and other additional layers which can easily be integrated into your own Google Map projects)

<http://www.maps-for-free.com:80/>

Wikimapia

<http://www.wikimapia.org/>

Free Geography Tools

<http://freegeographytools.com/>

Maps Compare (Maps Compare is a website with four different on-line map services on one page. The site places Google Maps, the Google Earth browser plugin, Yahoo Maps and Bing Maps beside each other, which can be quite useful if you want to compare the map coverage provided by each provider in different locations)

<http://geshout.com/mapscompare/all.php>

Buncha Maps (Map comparison sites always seem to be very popular. One of the most popular searches on Google Maps Mania seems to be for sites that let you view the different online map providers

side-by-side. Buncha Maps is a new application that lets you view Google Maps, Bing Maps, ESRI Maps and OSM all in the same window. Actions in all four maps are synchronised, so if you pan and zoom in any of the maps the other maps will also show the selected view) <http://swingley.appspot.com/maps/four>

Dual Maps (Dual Maps is a map creation tool that allows anybody to make an embeddable map that includes a Google Map, a Google Maps Street View and a Virtual Earth Bird's Eye view of the same location. You can choose between the various options of either map service, which means you can have the Google satellite view alongside Virtual Earth's Bird's Eye view or the satellite/aerial View in both maps etc)

## Marine Corps

One-Eight Basetrack is an experimental media project, tracking the deployment of 1/8 – 1st Battalion, Eighth Marines, throughout the duration of their deployment to southern Afghanistan. A small team of mobile media operators is embedded with the battalion, transmitting their reports and reflections from Helmand province as they travel across the battalion's area of operations.

<http://www.korea-dpr.com/>

Multimedia: North Korea in 2011 To coincide with the launch of [our new blog on North Korea](#), Crisis Group has produced a multimedia presentation that looks at the history and current state of the "Hermit Kingdom". The presentation features an audio slideshow with fascinating and rare pictures from inside North Korea and commentary by Daniel Pinkston, Crisis Group's North East Asia Deputy Project Director. You can also explore the country's history, economy and military through background texts, interactive timelines and maps.

International Security Research and Intelligence Agency <http://www.isria.info/>

The Intelligence Network: IntellNet is dedicated to providing individuals and groups aggregated news and documents from around the world in an easy-to-access and understand format. Founded in early 2000 as a private project to more easily disseminate information, during the 4 years since its creation IntellNet proved itself to be a great source of knowledge. With today's re-launch, The Intelligence Network will stand upon the shoulders of giants in order to see further and push higher; expanding upon the very foundations of the U.S. Open Source Intelligence (OSINT) community. <http://www.intellnet.org/>

Sources And Methods

<http://sourcesandmethods.blogspot.com/2008/01/bahraini-foreign-minister-speaks-iiss.html>

This is a website that describes various terrorist groups of the world. It lists their known activities, their strength, location/area of operation and external aid. It is part of the SITE Institute's website that documents and tracks terror-related violence and "extremist websites, public records, and international media reports" to establish "links among terrorist entities and their supporters." Site features links to news, background on terrorist groups, material about court cases, and audio and video clips. Some material in other sections of the site available for a fee. Publisher: SITE Intelligence Group.

INSCOM Intelligence Analyst Training Program

<https://www.us.army.mil/suite/portal/index.jsp>

The idea with this training course is to help students understand how to gain intelligence on people or organizations using Internet based open source intelligence. Although the course is presented by Paterva the course does not center just on Maltego technology. The training course focuses on the underlying technology and techniques and tries to give students insight in how the tool collects and correlates the information.

<http://www.paterva.com/web4/index.php/services>

## ***OSINT Exploitation and The Criminal Threat***

First off let me state that no self respecting criminal would be without a wireless connection and all the apps that go with it.

This section is devoted to technology that is very easily exploitable by criminals. I use the word “criminal” as an umbrella term for anything from gangs to terrorists, human/drug/weapon smugglers to burglars, and anything in between. In other words, it is all-encompassing. It is not difficult to think like a criminal; all of us have at some point thought about doing something cruel. But for the most part we do not carry out our thoughts into action because we are law abiding citizens and we are rational people. Think about the time when a neighbor, a friend, girlfriend, boyfriend, or relative did something to displease us. Human nature, and psychology, says get even and do something back. But again, we are rational people. What I am trying to drive here is the point that all of us are capable of evil thought and it does not matter who we are. We just don’t admit to it. Remember Jimmy Carter and lust; not necessarily evil though. How about Bill Clinton and “I did not inhale”. They admitted to things in the hope that by doing this they would get positive results but instead those innocent comments came back to haunt them and they became the butt end of jokes. So, go ahead! Think like a human or drug smuggler. Think like a terrorist. Think like a gang banger. Think like a drug cartel boss. But most of all think! How can I exploit technology to further my criminal enterprise? By doing this brand of thinking you help law enforcement counter the threat whatever it may be or at least make them aware of the type of countermeasures to employ.

Why is it that most of the OSINT discussions are held behind firewalls and there is a requirement for passwords to access the subject? No, enough! I am going out on a limb and invite all to it. What a contradiction in terms. Open source but yet very hush, hush. We are not fooling anyone. Even criminals know how to exploit open source information and create intelligence from it. When I told a good friend of mine of what I intended to do, this is what he had to say. “We are not dealing with ignorant or stupid people. These people come from our professions, the computer industry, are computer engineers, etc. If you check open source you will see the bad guys asking for people with these skills. Not putting the information out in the open or in a book because the bad guys will find out and use it is only for those that are new to the game, do not understand the criminal element or their MO. In addition not having this information will hinder us as the new people to the game may not even know we know... Bad guys leave trails when they get sloppy and they do.”

**Personal Drones:** When and where does it end? That is, making it easier for the enemy. Let's go beyond celebrity stalking and spying on your neighbors. Drug Cartels, human and drug smugglers are always on the lookout for anything that will make their activities more successful. Let's role play: I am a smuggler (humans or drugs) and I have lookouts on high hills overlooking the border fence reporting activities back to me, however, they are static and cannot maneuver from their high points. I can utilize drones to hover over the fence/border for 360 degree coverage. I can see where the Border Patrol vehicle is on the other side of the fence; something my lookout even on a high point cannot observe. I can also determine how long it takes for the patrol to make a round of the area. What else can I make out? What they look like and now I can make contact with them when they are off duty for possible bribery. The options are without limits. I have millions at my disposal. I will buy several for the kids along the border to enjoy flying while I interleave my own surveillance drone into the mix. I could also land mine on the other side to lay in wait and observe. Granted the batteries do not last long but I don't need that much downtime. As soon as I observe what I need, I can bring my craft back over the fence and send another to lie in wait or do other types of collection. I can hire techies and have them experiment with the drones to extend their range and battery life. Does it sound far fetched? I don't think so.

Pandora's Box

### ***Smartphone Applications***

Now here are two apps no self respecting terrorist or smuggler should be without; Compass and GpsCompassMap. My intentions are not of sounding heartless or to delve into the macabre but rather to point out the control criminals obtain with this technology. The following examples deal mostly with Google Earth and how it has been utilized by terrorists. With the newer applications one does not need the desktop or laptop computer but a simple smartphone with all the bells and whistles of a regular CPU. The other advantage is that you do not leave as large an electronic footprint. The smartphone GPS is turned on as needed to avoid detection. There are other ways also.

No doubt you have heard or read about Iraqi insurgents having Google Earth imagery of British military bases (<http://news.nationalgeographic.com/news/2007/03/070312-google-censor.html>).

There are indications that the gunmen who stormed Mumbai on November 26, and the people who trained them, were technically literate. The group appears to have used complex GPS systems to navigate their way to Mumbai by sea. They communicated by satellite phone, used mobile phones with several different SIM cards, and may have monitored events as the siege unfolded via handheld Blackberry web browsers

([http://technology.timesonline.co.uk/tol/news/tech\\_and\\_web/the\\_web/article5311241.ece](http://technology.timesonline.co.uk/tol/news/tech_and_web/the_web/article5311241.ece)).

Israel's fears in regards to Google Earth's satellite imaging tools have come to fruition. Members of Palestine's al-Aqsa Martyrs Brigade, a group aligned with the Fatah political party, has admitted to using Google Earth for mapping targets for rocket strikes. Khaled Jaabari, the group's commander, has said that they are using Google Earth images to check details against their own maps in order to find sensitive areas that are vulnerable to strikes (<http://mashable.com/2007/10/25/missile-attacks-israel-google-earth/>).

**Compass** – I have tried this one and although still a little quirky it gives GR8 results. I can just begin to imagine the ways a criminal can put this technology to use. It is accurate when it comes to the coordinates and addresses. I cross referenced it with Google Earth, also on my smartphone, and it is right on. Using those two in concert give excellent results. Very handy for a criminal away from built up areas where all they want are coordinates that can be saved and returned to at a later date. I think you get my implication here.

**GpsCompassMap** – Another great little app. Combine Google Earth, Compass and this one and you have some power at your disposal. This one could replace Compass altogether but the more apps to cross check for accuracy, the better. Criminals are sure to fall in love with this one. It is extremely accurate. Went home for lunch and adjusted all the settings for the round-trip. It tells how many satellites are available and the number it is taking advantage of. Speed (miles, kilometers, knots, etc) of vehicle is very accurate as I compared it to my speedometer. As you leave the departure point the screen adjusts to show the entire track and at the end shows distance traveled. Geo coordinates which change according to location are a great feature. Superb tool for smugglers on the Southwest (Arizona/Mexico) Border, but that's as far as I go with how to use it.

**Untraceable Encrypted Blackberrys** - Mexico has no reliable register of handsets, mobile numbers, or users. Vendors are unregistered and sell the phones and SIM cards for cash, no questions asked. In other words, the cartels have nothing to worry about until such a time that Mexico makes strides to establish an official registry. (<http://www.theage.com.au/national/bikies-trafficking-in-data-secrecy-using-mexican-blackberrys-20110205-1aht9.html>)

### ***Open Source Software***

(necessary for the sharing of all forms of information)

STRONG ANGEL TOOZL

<http://www.strongangel3.net>

## ***Operations Security (OPSEC)***

OPSEC Awareness for Military Members, DoD Employees and Contractors (This is an interactive web-based course that provides OPSEC awareness for military members, government employees, contractors and dependents. The course provides information on the basic need to protect unclassified information about operations and personal information to ensure safe and successful operations and personal safety. The course includes a printable certificate which can serve as evidence that a student completed the course. When a student takes the course using this link, DSS will not maintain any record of that student by name or any personally identifiable information. If the student needs documentation that he or she has completed the course he or she will have to print the certificate at the end of the course.) The course may take a few minutes for the initial download on slow internet connections. This training will take approximately 45 minutes to complete.

<http://cdsetrain.dtic.mil/opsec/index.htm>

Government contractor Frazier-Masonry provides detailed photographs of some of their contract work. Clients include Navy SEALS, NCIS, Marine Corp Special Operations Command West, EOD and various other agencies in and around Southern California. The work of these mostly U.S. Navy agencies is highly sensitive and the release of such photos, which reveal location, building lay-out and structural nature is a serious violation of Operational Security(OPSEC). Posted on social networking site.

## Search Engines & Meta Search Engines

### (includes Arabic And Other Language Search Engines)

Powerset – technology that attempts to mine meaning out of web pages -- specifically, Wikipedia articles. This isn't a general-purpose search engine, but it is a tremendous tool if you are looking for information on a subject that spans a number of Wikipedia articles, or that has a number of meanings.

Hakia – Same as Powerset above.

Planetsearch (takes advantage of 16 search engines)

<http://www.planetsearch.com/>

GoshMe (You may not know but there are more than half a million search engines out there on the Internet, with exclusive content and features. GoshMe will be the way to discover them, and even better, the key to know when and how to use them.)

<http://www.goshme.com/login.jsp>

Yahoo Short Cur Cheat Sheets

<http://help.yahoo.com/help/us/ysearch/tips/tips-01.html>

WayBack Machine (Browse through over 150 billion web pages archived from 1996 to a few months ago. To start surfing the Wayback, type in the web address of a site or page where you would like to start, and press enter. Then select from the archived dates available. The resulting pages point to other archived pages at as close a date as possible. Keyword searching is not currently supported.) *Note: If you find some links in this handout that no longer work you can get some practice with this site. Copy and paste the URL that is no longer active into the wayback machine. This should take you back to how the web page existed. Then by using keywords it's possible you may be able to reach the new site with new and updated content.*

## **Social Engineering**

Social engineering is the act of manipulating people into performing actions or divulging confidential information. The term typically applies to trickery or deception for the purpose of information gathering, fraud, or computer system access; in most cases the attacker never comes face-to-face with the victim.

Social Engineering Fundamentals, Part I: Hacker Tactics

Social Engineering Fundamentals, Part II: Combat Strategies

<http://www.symantec.com/connect/articles/social-engineering-fundamentals-part-ii-combat-strategies>

## Social Networking

Social networking sites can be especially useful for the analyst. Many of the sites are used by terrorists, gangs, criminals and others with less than honorable intentions. Careful analysis of these open source worlds can yield intelligence you never knew existed. Like a jigsaw puzzle, you may have to visit several sites (as the enemy does to post bits and pieces of information so as to not leave a trail) to bring it all together. This is the heart of analysis: bringing it all together to monitor the beat.

Social Media Training Sites	<a href="http://kommein.com/25-free-online-social-media-classes/">http://kommein.com/25-free-online-social-media-classes/</a> <a href="http://kommein.com/25-social-media-how-tos-resources-tutorials-and-lessons/">http://kommein.com/25-social-media-how-tos-resources-tutorials-and-lessons/</a> <a href="http://www.newsu.org/">http://www.newsu.org/</a> <a href="http://www.afspc.af.mil/shared/media/document/AFD-100521-024.pdf">http://www.afspc.af.mil/shared/media/document/AFD-100521-024.pdf</a> <a href="http://www.defense.gov/socialmedia/education-and-training.aspx/">http://www.defense.gov/socialmedia/education-and-training.aspx/</a> <a href="http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-101-Handout.pdf">http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-101-Handout.pdf</a> <a href="http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-202-Handout.pdf">http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-202-Handout.pdf</a> <a href="http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-303-Handout.pdf">http://businessjournalism.org/wp-content/uploads/2011/02/Social-Media-303-Handout.pdf</a> <a href="http://businessjournalism.org/wp-content/uploads/2010/03/Soc-Media-handout.pdf">http://businessjournalism.org/wp-content/uploads/2010/03/Soc-Media-handout.pdf</a>

## ***Software/Tools For The Open Source Analyst***

Analysis of Competing Hypotheses Software -- Analysis of Competing Hypotheses (ACH) is a simple model for how to think about a complex problem when the available information is incomplete or ambiguous, as typically happens in intelligence analysis. The software downloadable here takes an analyst through a process for making a well-reasoned, analytical judgment. It is particularly useful for issues that require careful weighing of alternative explanations of what has happened, is happening, or is likely to happen in the future. It helps the analyst overcome, or at least minimize, some of the cognitive limitations that make prescient intelligence analysis so difficult. ACH is grounded in basic insights from cognitive psychology, decision analysis, and the scientific method. It helps analysts protect themselves from avoidable error, and improves their chances of making a correct judgment. This software was developed by Palo Alto Research Center (PARC) in collaboration with Richards J. Heuer, Jr. It was developed for use by the U.S. Intelligence Community with funding from the Intelligence Community's Advanced Research and Development Activity (ARDA) and the Office of Naval Research (ONR). In distributing ACH, PARC is making the presently downloadable version of the program available to the general public at no cost when used for non-commercial or educational purposes subject to the terms and conditions of its end user license.

<http://www2.parc.com/istl/projects/ach/ach.html>

CARVER2 - Target Analysis Software -- CARVER2, a free software tool that provides a non-technical method of comparing and ranking critical infrastructure and key resources. It is the only assessment tool that ranks critical infrastructure across sectors. The CARVER2 vulnerability assessment tool is designed to quickly and easily identify and compare potential natural disaster and/or terrorist targets at the local, state and national levels in order to assist government officials in the allocation of protective resources. The CARVER2 target analysis tool is available free of charge to federal, state, and local government officials and agencies, as well as non-profit and educational institutions.

<http://www.ni2cie.org/CARVER2.asp>

Computer Online Forensic Evidence Extractor -- Microsoft COFEE is being made available to individuals employed by law enforcement agencies within the United States and Canada. COFEE means the Computer Online Forensic Evidence Extractor tool that fits on a USB drive and automates the execution of commands for data extraction and related documentation. Distribution is limited to law enforcement agencies. Access to the COFEE product requires verification of employment with a law enforcement agency and agreement to the terms and conditions of the Microsoft/NW3C Sublicense Agreement. The verification process is automated if you have an email account with RISS.NET or LEO.GOV, or have an account with NW3C.

<https://cofee.nw3c.org/>

Computer Security Evaluation Tool -- The Department of Homeland Security (DHS) has released its latest cyber system assessment tool to the Critical Infrastructure/Key Resources (CI/KR) community. The Computer Security Evaluation Tool (CSET) is a desktop software tool that guides users through a step-by-step process to evaluate their cyber systems and network security practices against recognized industry standards. According to DHS, the benefits of CSET include:

- Contributing to an organization's risk management and decision-making process;
- Raising awareness and facilitating discussion on cyber security within the organization;
- Highlighting vulnerabilities in the organization's systems and providing recommendations on ways to address those vulnerabilities;
- Identifying areas of strength and best practices being followed in the organization;
- Providing a method to systematically compare and monitor improvement in the cyber systems; and
- Providing a common industry-wide tool for assessing cyber systems.

[http://www.us-cert.gov/control\\_systems/satool.html](http://www.us-cert.gov/control_systems/satool.html)

CrimeStat III -- CrimeStat III is a spatial statistics program for the analysis of crime incident locations, developed by Ned Levine & Associates under the direction of Ned Levine, PhD, that was funded by grants from the National Institute of Justice. The program is Windows-based and interfaces with most desktop GIS programs. The purpose is to provide supplemental statistical tools to aid law enforcement agencies and criminal justice researchers in their crime mapping efforts. CrimeStat is being used by many police departments around the country as well as by criminal justice and other researchers. The latest version is 3.3. The program inputs incident locations (e.g., robbery locations) in 'dbf', 'shp', ASCII or ODBC-compliant formats using either spherical or projected coordinates. It calculates various spatial statistics and writes graphical objects to ArcGIS®, MapInfo®, Surfer for Windows®, and other GIS packages.

<http://www.icpsr.umich.edu/CrimeStat/>

Comprehensive R Archive Network -- Comprehensive R Archive Network a freely available language and environment for statistical computing and graphics which provides a wide variety of statistical and graphical techniques: linear and nonlinear modelling, statistical tests, time series analysis, classification, clustering, etc.

<http://cran.r-project.org/>

Decrypto 8.5 -- Decrypto is a fast and automated cryptogram solver by Edwin Olson. It can decode word games often found in newspapers, including puzzles like cryptoquips and patristocrats. You can also download a stand-alone version. [We have also found this program useful for quickly breaking simple substitution ciphers used by some criminal gangs.]

<http://www.blisstonia.com/software/WebDecrypto/>

Encryption Wizard (EW) DoD Software Protection Initiative -- EW is an SPC implementation of the Advanced Encryption Standard (AES) (Rijndael) augmented with a file manager Graphical User Interface (GUI) for ease of use. The 128-bit encryption/decryption algorithm used by Encryption Wizard is considered cryptographically strong and is routinely used in National Security Agency (NSA) and National Institute of Standards and Technology (NIST) certified products. Encryption Wizard is designed to protect data at rest and in transit (such as email attachments). EW is an easy to use tool for protecting sensitive (but not classified) documents, and for protecting files before transmission via email. It allows a user to encrypt files using a 128-bit implementation of the Advanced Encryption Standard (AES) with simple drag-and-drop efficiency. Encryption Wizard can significantly increase an organization's security posture at little to no cost to protect sensitive data in transit (E-mail, FTP, or shared web folders) or at rest on a removable storage device. The primary version for government users utilizes a FIPS 140-2 validated encryption engine licensed from RSA

<http://spi.dod.mil/ewizard.htm>

Near Repeat Calculator -- This software originates with the relatively recent discovery of the near repeat phenomenon in burglary patterns, a discovery that has highlighted the communicability of crime events that affect the risk level at nearby locations. The near repeat phenomenon states that if a location is the target of a crime (such as burglary), the homes within a relatively short distance have an increased chance of being burgled for a limited number of weeks (Townsley et al, 2003; Bowers and Johnson, 2004; Johnson and Bowers, 2004a, 2004b). This communicability of risk to nearby locations for a short amount of time raises the possibility that other crime types may also suffer from a near repeat spatio-temporal pattern of behavior.

The analytical method employed builds on a space-time clustering methods first pioneered by Knox (1964) to study the epidemiology of childhood leukemia. The Knox test seeks to determine whether there are more event-pairs observed that occur with a closer proximity in space and time than would be expected on the basis of a random distribution. To do this, each shooting for a particular dataset is compared with every other and the spatial and temporal distance between them recorded. The result is a matrix of space-time distances.

To establish a null hypothesis measure against which to test the shooting patterns, we employ a Monte Carlo simulation process. By computing multiple simulations of the expected values, it is possible to generate an expected distribution under a null hypothesis – using the actual study data. This provides a unique way to examine what would occur if there were no near repeat patterns.

<http://www.temple.edu/cj/misc/nr/>

Problem Analysis Module -- Problem Analysis Module (PAM) gives you a framework for analyzing any persistent crime and public safety problem. PAM will ask you to input information concerning every aspect of the problem and then suggest the kinds of responses you could try. PAM was developed to assist police problem solving through the asking of specific questions. The questions come from research into a set of powerful theories within the field of Environmental Criminology – particularly Routine Activity Theory, Situational Crime Prevention, and Crime Pattern Theory.

<http://www.popcenter.org/learning/pam/>

RFFlow 5 -- RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. RFFlow has the capability to generate crime analysis charts.

<http://www.rff.com/index.htm>  
[http://www.rff.com/sample\\_crime\\_analysis.htm](http://www.rff.com/sample_crime_analysis.htm)

RAIDS On-Line Public Crime Map -- BAIR's free public crime map, RAIDS Online, connects law enforcement with the community to reduce crime and improve public safety. RAIDS Online is absolutely free to law enforcement and the public! RAIDS On-line's public crime map works with any RMS to allow law enforcement to share crime data with the public through an easy-to-use online crime map and analytics dashboard. The data is displayed with 8 fields of limited offense information to protect victim privacy. This is a valuable tool for law enforcement to communicate crime activity to their citizens and the media.

<http://bairanalytics.com/raidsonline>

Squidmat (courses of action evaluation program) -- The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes user-supplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. SquidMat is designed as a replacement decision matrix program for the CAS3 program DECMAT.

Analyst Toolbox:A Toolbox For The Intelligence Analyst

[http://it.ojp.gov/documents/analyst\\_toolbox.pdf](http://it.ojp.gov/documents/analyst_toolbox.pdf)

22 Free Tools for Data Visualization and Analysis (There are many tools around to help turn data into graphics, but they can carry hefty price tags. The cost can make sense for professionals whose primary job is to find meaning in mountains of information, but you might not be able to justify such an expense if you or your users only need a graphics application from time to time, or if your budget for new tools is somewhat limited. If one of the higher-priced options is out of your reach, there are a surprising number of highly robust tools for data visualization and analysis that are available at no charge.)

[http://www.computerworld.com/s/article/9214755/Image\\_gallery\\_22\\_free\\_tools\\_for\\_data\\_visualization\\_and\\_analysis](http://www.computerworld.com/s/article/9214755/Image_gallery_22_free_tools_for_data_visualization_and_analysis)

8 more free tools for data visualization and analysis

[http://blogs.computerworld.com/18212/8\\_more\\_free\\_tools\\_for\\_data\\_visualization\\_and\\_analysis](http://blogs.computerworld.com/18212/8_more_free_tools_for_data_visualization_and_analysis)

**GeoChat** It is designed to enable self-organizing group communications by allowing users to link the field, headquarters, and the local community in a real-time, interactive conversation visualized on the surface of a map. GeoChat is a tool for group communications based on SMS, email, and Twitter. People use GeoChat to simplify team communications, logistics and data reporting, and they can extend their own software applications using the open APIs. GeoChat is a flexible open source group communications technology that lets team members interact to maintain shared geospatial awareness of who is doing what where — over any device, on any platform, over any network. GeoChat allows you and your team to stay in touch one another in a variety of ways: over SMS, over email, and on the surface of a map in a web browser. Whether you are sitting at a computer with a high-speed Internet connection, or on the go with your mobile phone, GeoChat lets you react to events on the ground with maximum agility, forming cross-organizational virtual teams on the fly, linking field to headquarters, and keeping everyone on your team connected, in sync, and aware of who is doing what, and where.

New Tools of Military Soft Power <http://www.nationaldefensemagazine.org/Pages/default.aspx>

Broadcast Television Tools to Help Intelligence Analysts Wade Through Data  
<http://www.nationaldefensemagazine.org/archive/2011/March/Pages/BroadcastTelevisionToolstoHelpIntelIntelligenceAnalystsWadeThroughData.aspx>

Granted there are many units out there that do not have the budget to buy or subscribe to expensive analytical software, but this should not stop the analyst from doing his/her work. There are abundant resources of freebies that when used in conjunction with each other provide just as powerful analytical capabilities. I actually view this as a heavy **plus (+)**. When we use expensive commercial versions of analytical software that give instantaneous analysis/gratification we tend to depend too much on the outcome and in many cases take the results for granted. When we do this we cheat ourselves from doing our own critical thinking and critical analysis for good predictive analysis. However, by taking advantage of the free (or very cheap) community versions and using them together we force ourselves to do more critical thinking/analysis because we are trying to determine what information to input into one program based on the output of another program.

Recorded Future (scour the web, extract, analyze and rank, then explore the past, present and future.) <https://www.recordedfuture.com/>

IP Locator (Find an Internet user's geographic location without invading visitor's privacy)

IP Locator Object is a multiplatform API that will help you understand your visitors better by geographical location. IP Locator Object provides a wealth of information you can use to geotarget.

<http://www.melissadata.com/dqt/ip-locator.htm>

#### Sample Output using IP Locator Object

IP Address	216.231.3.166
Latitude	33.4774
Longitude	-117.705
ZIP	92624
Region	CALIFORNIA
Name	COX COMMUNICATIONS INC
Domain	COX.NET
City Name	DANA POINT
Country	UNITED STATES
Abbreviation	US

Google Goggles. You have to try this one and see for yourself. My mind wandered as I gave this one a spin. Suppose a drug cartel member is interviewed in a strange location, however, in the distance you are able to distinguish a building and.... What if you found a note at a terrorist location in a different language. The possibilities are endless. Google Goggles lets you search Google using pictures from your camera phones. We take an image as input, and using several image recognition backends (object recognition, place matching, OCR, etc), we return relevant search results.

<http://www.google.com/mobile/goggles/#text>

Google Squared. Google Squared is an experimental tool that takes a category (like US presidents, roller coasters, or digital cameras) and attempts to create a starter "square" of information, automatically fetching and organizing facts from across the web. You can modify your square by removing rows and columns you don't like--or by adding new rows and columns and having Google Squared attempt to fetch the relevant facts. Verify and correct the facts in your square by exploring the original sources and investigating other possible values. If you're happy with your square you can save it and come back to it later. Google Squared does the grunt work for you, making research fast and easy. I use this one often. You can then export the results into an excel spreadsheet that you can then modify to suit your needs. Using this one in conjunction with Google Squared helps fill in the blanks.

<http://www.google.com/squared>

Google News Timeline is a web application that organizes information chronologically. It allows users to view news and other data sources on a zoomable, graphical timeline. You can navigate through time by dragging the timeline, setting the "granularity" to weeks, months, years, or decades, or just including a time period in your query (ie. "1977"). I queried MS-13 and was amazed at the results. Went back to 1996 and was able to do some raw trend analysis. Did the same thing with "California Gangs". It will take patience. Available data sources include recent and historical news, scanned newspapers and magazines, blog posts and Twitter status messages, sports scores and various types of media like music albums and movies. Using this one in conjunction with Google Squared helps fill in the blanks.

<http://newstimeline.googlelabs.com/>

Maltego is an open source intelligence and forensics application. It will offer you timous mining and gathering of information as well as the representation of this information in a easy to understand format. Coupled with its graphing libraries, Maltego allows you to identify key relationships between information and identify previously unknown relationships between them. <http://www.paterva.com/web5/>

ORA is a dynamic meta-network assessment and analysis tool developed by CASOS at Carnegie Mellon. It contains hundreds of social network, dynamic network metrics, trail metrics, procedures for grouping nodes, identifying local patterns, comparing and contrasting networks, groups, and individuals from a dynamic meta-network perspective. \*ORA has been used to examine how networks change through space and time, contains procedures for moving back and forth between trail data (e.g. who was where when) and network data (who is connected to whom, who is connected to where ...), and has a variety of geo-spatial network metrics, and change detection techniques. \*ORA can handle multi-mode, multi-plex, multi-level networks. It can identify key players, groups and vulnerabilities, model network changes over time, and perform COA analysis. It has been tested with large networks (106 nodes per 5 entity classes).Distance based, algorithmic, and statistical procedures for comparing and contrasting networks are part of this toolkit.

<http://www.casos.cs.cmu.edu/projects/ora/>

#### Computational Models and Social Network Tools

[http://www.casos.cs.cmu.edu/computational\\_tools/tools.html](http://www.casos.cs.cmu.edu/computational_tools/tools.html)

RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. 30 day free trial period; \$49.00 thereafter for individual. <http://rff.com/>

The Brain Simply type in your ideas. Drag and drop files and web pages. Any idea can be linked to anything else. Using your digital Brain is like cruising through a Web of your thinking. See new relationships. Discover connections. Go from the big picture of everything to a specific detail in seconds

<http://www.thebrain.com/>

SPY (spy can listen in on the social media conversations you're interested in. What do you want to listen for?) <http://www.spy.appspot.com/>

Spokeo (not your grandmas phone book) <http://www.spokeo.com/>

Silobreaker (for those familiar with Analyst Notebook, I think you'll like this)

<http://www.silobreaker.com/>

Evolution (It has applications in forensic investigations, law enforcement, **intelligence operations**, identity fraud, and identity verification processes). Download the free community edition. It is not as powerful as the commercial version, which is also very expensive, but has great utility when used in conjunction with other free sites like Silobreaker. <http://www.paterva.com/web2/>

A Periodic Table of Visualization Methods (If you've ever wondered how to model something, or were looking for new ideas for segmenting and presenting complex concepts, this is an incredible online resource. A neat graphical explanation and example of each "element" (ex; a cycle diagram) appears as soon as your cursor scrolls over them. For instance, they've color-coded their categories: data, metaphor, concept, strategy, information, and compound visualisation techniques. As if that were not enough to

spark your brain, the creators also provide clues as to whether the model works best for convergent or divergent thinking, and whether it is more for an overview vs. detailed perspective.)

[http://www.visual-literacy.org/periodic\\_table/periodic\\_table.html](http://www.visual-literacy.org/periodic_table/periodic_table.html)

Sentinel Visualizer (for those of you who have experience with Crime Link and Analyst Notebook this one should be quite interesting. You can download a 45-day fully functional with all the bells and whistles copy and take it for a spin, and at the same time train yourself to use the software. It may come in handy down the road and you can always say you know how to use it) <http://www.fmsasg.com/>

The Best Ever Freeware Utilities <http://www.techsupportalert.com/>

Ideas Worth Spreading: Imagine what the open source analyst has at his/her disposal with this type of technology. View the video and see what I mean <http://www.ted.com/index.php/talks/view/id/129>

Free Antivirus And Spyware Software <http://free.grisoft.com/doc/5390/us/frm/0>

Want Your Own Blog? It's Easy. It's Free <https://www.blogger.com/start> <http://wordpress.com/>

TOR Anonymizer <http://www.torproject.org/>

Images (convert 2D to 3D online for free) The 3D face reconstruction may have utility if you only have a frontal face shot of a suspect.

<http://sourcesandmethods.blogspot.com/2008/02/convert-2d-to-3d-online-for-free.html>  
<http://make3d.stanford.edu/>

Semantics – in a nutshell, the study of words. Great site of 302 semantic web videos and podcasts. <http://www.semanticfocus.com/blog/entry/title/302-semantic-web-videos-and-podcasts/>

NNDB Mapper (a visual tool for exploring the connections between people in NNDB, linking them together through family relations, corporate boards, movies and TV, political alliances, and shadowy conspiracy groups. Maps can be saved and shared for others to explore.) <http://www.nndb.com/>

Generate Maps of the Blogosphere (Generate animated clickable maps of connected blogs from [Blogger](#). Simply enter the URL of a blog website to start mapping.

[http://www.lococitato.com/blogger\\_map/blogger\\_map.html](http://www.lococitato.com/blogger_map/blogger_map.html)

TouchGraph Google Browser (The touch graph google browser reveals the network of connectivity between websites, as reported by Googles database of related websites)

<http://www.touchgraph.com/TGGoogleBrowser.html>

SquidMat (The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes user-supplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. <http://faculty.tamu-commerce.edu/jmstauffer/Squidmat/>

Decision Matrix Software Download <http://www.dcsift.com/military/software.html>

NNDB Tracking the Entire World. Not sure if this one has any utility but I throw it in for your perusal. I had fun with Fidel Castro, Hugo Chavez and Vladimir Putin. NNDB is an intelligence aggregator that tracks the activities of people we have determined to be noteworthy, both living and dead. Superficially, it seems much like a "Who's Who" where a noted person's curriculum vitae is available (the usual information such as date of birth, a biography, and other essential facts.). But it mostly exists to document the connections between people, many of which are not always obvious. A person's otherwise inexplicable behavior is often understood by examining the crowd that person has been associating with.

<http://www.nndb.com/>

Visualization Software: Analysts are great when it comes to understanding relationships. Visual results jump right at you. If they can query a search engine that produces results in a relational (visual) format, they immediately grasp the information and start drawing conclusions. Visual results are more appealing than endless lists of browsing results which are extremely time consuming even when doing key word searches.

Viewzi is a metasearch engine. It searches not only Google and Yahoo, but also Flickr, YouTube and other great sources of information to present the search results blended in different "flavors". You not

only get one, but seemingly countless ways to view your search results, each using thumbnail images, screenshots and more as visual aids  
<http://www.viewzi.com/>

NeXplore lets you choose between three ways of viewing search results. For starters, there is the regular list of web search results: Title, description and URL. But you get much more than that. Thumbnail images and pop-up previews which make it easier to browse the search result and decide which to click.  
<http://www.nexplore.com/>

TouchGraph  
Quintura

<http://quintura.com/>

## Steganography and Terrorists

*Steganography is the science of writing hidden messages in such a way that no one apart from the sender and intended recipient even realizes there is a hidden message.*

Sunday, July 31, 2011

*In 2010 Moscow communicated with a ring of alleged spies in America by encoding instructions in otherwise innocent-looking images on public websites. It's a process called steganography.*

*Steganography is a smart way to hide data into other files, called carriers. Modified carriers will look like the original ones, without perceptible changes. The advantage of steganography, over cryptography alone, is that messages do not attract attention to themselves. Plainly visible encrypted messages will arouse suspicion, and may in themselves be incriminating in countries where encryption is illegal. Today we can use some free tools to create covert transmission for any sensitive data or to protect your copyright.*

*Protecting files copyright is by using Watermarking which is the process of embedding information into a digital signal which may be used to verify its authenticity or the identity of its owners. Still images, video, music, text, and software are all easily copied and illegally distributed, causing the authors to lose out on considerable income in royalties.*

*By embedding identifying information in a file, watermarking software enables authors to control the distribution of and to verify ownership of their digital information.*

*The first tool is OpenPuff a freeware steganography tool for Microsoft Windows created by Cosimo Oliboni and still maintained as independent software author.*

*The program is notable for being the first steganography tool (version 1.01 released on December 2004) that:*

- *Let's users hide data in more than a single carrier file. When hidden data are split among a set of carrier files you get a carrier chain, with no enforced hidden data theoretical size limit (256Mb, 512Mb... depending only on the implementation)*
- *Implements 4 layers of hidden data obfuscation (cryptography, scrambling, whitening and encoding)*
- *Extends deniable cryptography into deniable steganography*

*The current version is OpenPuff 3.40 and released on the 18th of July.*

*Another interesting tool is QuickStego which lets you hide text in pictures so that only other users of QuickStego can retrieve and read the hidden secret messages.*

## **Suicide Bomber Profile**

Following is a checklist for observing, reporting, responding and investigating suicide bombing incidents. It is not designed as a comprehensive or complete list of all considerations in these areas but is suggestive of the types of common concerns that may affect police and other emergency service responders. A noted authority on terrorism states that Israeli authorities and psychologists have carefully developed behavioral profiles that might help security personnel identify a potential suicide bomber. The following are among the most obvious signs of such persons according to this source.

- The wearing of heavy clothing, no matter what the season. Long coats or skirts may be used to conceal explosive belts and devices.
- An unusual gait, especially a robotic walk. This could indicate someone forcing or willing himself/herself to go through with a mission.
- Tunnel vision. The bomber often will be fixated on the target and for that reason will look straight ahead. He or she also may show signs of irritability, sweating, tics, and other nervous behavior. (The Al Qaeda terrorist Ahmed Ressam, who was captured at a border crossing in Washington state while driving a car filled bomb-making materials, caught the attention of authorities because of his excessive sweating, furtive eyes, and other nervous movements.)
- The appearance of being drugged. The suicide truck bomber who attacked the U.S. Marine Barracks in Beirut in 1983 had been drugged before the attack and was tied to the seat of his vehicle.
- Signs of drug use - including, for example, enlarged pupils, fixed stare, and erratic behavior.
- Bags or backpacks (used to carry explosives, nails, and other shrapnel). The bomber generally holds his or her bag or backpack tightly, sometimes gingerly, and may refuse to be separated from it.
- A fresh shave—a male with a fresh shave and lighter skin on his lower face may be a religious Muslim zealot who has just shaved his beard so as not to attract attention, and to blend in better with other people in the vicinity.
- A hand in the pocket or tightly gripping something—this could be someone clutching a detonator or a trigger for an explosive device. Such triggers, which may be designed in the form of button, usually are rather stiff so that they may not be set off accidentally. (One Israeli acquaintance described how he and several guards shot a would-be bomber numerous times, but found his twitching finger still on the button—and still posing a danger, thereafter.)
- Evasive movements. It seems obvious that anyone who tries to avoid eye contact, or to evade security cameras and guards, or who appears to be surreptitiously conducting surveillance of a possible target location, may be a bomber.

Such profiles are valuable not only for law enforcement personnel but for all persons who work in security or related fields in facilities or other locations that are potential targets or, where intelligence indicates an elevated risk of a terrorist attack. Programs throughout the United States have successfully recruited key personnel within the community to act as additional eyes and ears for law enforcement. Mall security officers for example have been introduced to the above type of profile information in order to more effectively spot potential terrorist threats. Similarly, community outreach programs provided training to other persons who are in positions where they are more likely to interact with terrorist cells or operatives, such as car rental agents, truck rental agents, security storage operators, hotel and motel managers, school and hospital security officers, and related persons.

## **Questions**

1. Which of the following statements is *false*?

(a) *Suicide bombing attempts have not yet been made within the United States.*

(b) *Most of what we know presently about suicide bombings has come from experiences*

*overseas in Israel and Iraq.*

(c) *A major disadvantage of suicide bombers on foot is the limited amount of explosives that they can reasonably conceal and carry.*

(d) *A major advantage of suicide bombers on foot is that they can penetrate targets not otherwise available to motor vehicles.*

2. Which of the following statements is *false*?

(a) *The main advantage of vehicular suicide bombers is the ability to carry large explosive payloads.*

(b) *Bloodborne pathogens can be delivered by suicide bombers.*

(c) *Suicide bombers can and have penetrated heavily fortified compounds.*

(d) *None of the above is false.*

3. Which of the following statements is *false*?

(a) *Suicide bombers often target location where large numbers of persons gather.*

(b) *In the preincident phase, surveillance of a target is often performed.*

(c) *Most commonly, suicide bombers are unmarried males between 16 and 40 years of age.*

(d) *Females have not been used for suicide bombings.*

## Answers

1. (a) Suicide bombing attempts have been made within the United States.

2. (d) None of the statements is false.

3. (d) Females have been used as suicide bombers.

## Suspicious Packages

### How to Handle Suspicious Mail

*What constitutes a suspicious letter or parcel? Some typical characteristics which ought to trigger suspicion include letters or parcels that:*

- Have any powdery substance on the outside.
- Are unexpected or from someone unfamiliar to you.
- Have excessive postage, handwritten or poorly typed address, incorrect titles or titles with no name, or misspellings of common words.
- Are addressed to someone no longer with your organization or are otherwise outdated.
- Have no return address, or have one that can't be verified as legitimate.
- Are of unusual weight, given their size, or are lopsided or oddly shaped.
- Have an unusual amount of tape.
- Are marked with restrictive endorsements, such as "Personal" or "Confidential."
- Have strange odors or stains.

# FBI Advisory

If you receive a suspicious letter or package

## What should you do?

- 1 Handle with care  
Don't shake or bump**
- 2 Isolate and look  
for indicators**
- 3 Don't Open, Smell  
or Taste**
- 4 Treat it as Suspect!  
Call 911**

**SUSPICIOUS MAIL ALERT**

If you receive a suspicious letter or package:

**If a parcel is open and/or a threat is identified . . .**

- 1 Handle with care.  
Don't shake or bump.**
- 2 Isolate it immediately.**
- 3 Don't open, smell, touch or taste.**
- 4 Treat it as suspect.  
Call local law enforcement authorities.**

For a Parcel:  
For a Radiological, Explosive, Toxic, Infectious, Corrosive, or Radioactive Object

Study Of Terrorism And Response To Terrorism (START) The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.	<a href="http://www.start.umd.edu/data/gtd/">http://www.start.umd.edu/data/gtd/</a> <a href="http://c21.maxwell.af.mil/terrorsm.htm">http://c21.maxwell.af.mil/terrorsm.htm</a>

## SUSPICIOUS BEHAVIOR COULD INDICATE TERROR PLOTTING

By Anthony L. Kimery

### **'... being able to distinguish the ordinary from the extraordinary'**

Coinciding with concerns among some intelligence services that suspected Hezbollah "sleeper cells" in Canada have been activated, Canadian law enforcement authorities increasingly are training for spotting potentially suspicious activity and behavior that may indicate terrorists are conducting surveillance or other goings-on in preparation for targeting a specific structure or location for attack.

Several years ago, Robert David Steele, an outspoken veteran intelligence officer, told HSToday.us that "50 percent of the 'dots' that prevent the next 9/11 will come from bottom-up [local] level observation" and unconventional intelligence from "private sector parties."

Since 9/11, the Department of Homeland Security (DHS) and law enforcement in the Washington, DC capital region have actively urged citizens to report "suspicious activity." Mobile electronic signs urging people to report suspicious activity are routinely placed at strategic locations throughout the metro area for periods of time. The last one of these portable warnings I saw was at the convergence of Key Bridge and George Washington Memorial Parkway on the Virginia-side of the Potomac River just across from Georgetown.

Lynda Howes, a civilian member of the emergency event and management unit of the Calgary (Canada) Police Service, told attendees of the "Tri-lateral Security Conference" in Calgary last week that law enforcement must learn how terrorists operating in order to prevent attacks. She said counterterrorism is only manageable if it is tackled at the grass roots level. She explained that it's vital that everyone - including the public, the police, government and private industry – recognizes the potential indicators of terrorism and what actions to take if, and when, they are encountered.

Howes said terrorists must recruit members, research their targets, procure resources, receive, transfer and conceal money, and provide transportation and communication.

And "each one of those phases represents an activity" that can be identified if a person is trained to know what to be on the look-out for. "Those activities are associated with a behavior. Once we have that behavior, those are things you and I will be witnessing every single day and are things we can pick up on as potential indicators."

In late 2002, The Air Force's Office of Special Investigations launched "Eagle Eyes," a program to "deter terrorism by recognizing and reporting pre-attack activities," according to an OSI memo.

"Every terrorist act is preceded by observable planning activities," according to the OSI memo. "When troops and citizens know what to look for and how to report suspicious activity, terrorist acts can be prevented."

Department of Defense personnel have routinely been advised to report suspicious reconnoitering of military facilities, people asking detailed information about specific sites, and any other activity which could indicate a "dry run" attack.

DHS says "knowing what to look for and being able to distinguish the ordinary from the extraordinary are the key elements to successful surveillance detection."

"A persistent stream of reported suspicious incidents requires an understanding of the purpose of terrorist surveillance, to know what terrorists look for, and how they conduct surveillance operations," DHS's advice states.

DHS states “terrorists conduct surveillance to determine a target's suitability for attack by assessing the capabilities of existing security and discerning weaknesses in the facility. After identifying weaknesses, they plan their attack at the point of greatest vulnerability.”

“Because terrorists must conduct surveillance—often over a period of weeks, months, or years—detection of their activities is possible,” DHS continued, noting, “regardless of their level of expertise, terrorists invariably make mistakes. The emphasis of surveillance detection is to key in on indicators of terrorist surveillance activities.”

DHS states “successful surveillance detection efforts require immediate reporting of incidents similar to the following:

- Multiple sightings of the same suspicious person, vehicle, or activity, separated by time, distance, or direction;
- Individuals who stay at bus or train stops for extended periods while buses and trains come and go;
- Individuals who carry on long conversations on pay or cellular telephones;
- Individuals who order food at a restaurant and leave before the food arrives or who order without eating;
- Joggers who stand and stretch for an inordinate amount of time;
- Individuals sitting in a parked car for an extended period of time;
- Individuals who don't fit into the surrounding environment because they are wearing improper attire for the location or season;
- Individuals drawing pictures or taking notes in an area not normally of interest to a tourist or showing unusual interest in or photographing security cameras, guard locations, or watching security reaction drills and procedures; and
- Individuals who exhibit suspicious behavior, such as staring or quickly looking away from individuals or vehicles as they enter or leave facilities or parking areas

Other activity which should cause a heightened sense of suspicion include:

- Suspicious or unusual interest;
- Surveillance (suspicious in nature);
- Inappropriate photographs or videos;
- Note-taking;
- Drawing of diagrams;
- Annotating maps; and
- Using binoculars or night vision devices

“Terrorists may also employ aggressive surveillance techniques, such as making false phone threats, approaching security checkpoints to ask for directions, or ‘innocently’ attempting to smuggle nonlethal contraband through checkpoints,” DHS’s advice states. “The terrorists intend to determine firsthand the effectiveness of search procedures and to gauge the alertness and reaction of security personnel.”

Karen Morley, senior director of TerraGo Technologies, Atlanta, Ga., who began her career in the geospatial industry in the US Air Force as a target intelligence specialist, told HSToday.us that terrorists need to conduct careful surveillance of a potential target in order to be confident that they can pull off a successful attack.

In 2004, RAND developed the book, *“Mapping the Risks: Assessing Homeland Security Implications of Publicly Available Geospatial Information,”* for the National Geospatial-Intelligence Agency, determined that “potential attackers, such as terrorist groups or hostile governments, are more likely to [utilize] reliable and timely information … such as through direct access or observation. In addition, many types of attacks, such as those by ground parties, are likely to require detailed information for attack planning purposes (depending on the target type and mode of attack). This type of information, which mostly

comes from such nongeospatial sources as engineering textbooks or human expertise on the operations of a particular type of industrial complex, is essential for attackers to have a high confidence in their plan.”

But according to John Bumgarner, an 18-year veteran of special operations who has worked with most of the three-letter intelligence agencies at one time or another and is now research director for security technology at the US Cyber Consequences Unit, a non-profit research institute, because of training like that promoted by Howes it has become more and more difficult for terrorists to physically recon targets, especially in the US.

“To actually start planning very detailed reconnaissance of a building, and all the streets that go into it, and all the alleyways and everything else, that could require a lot of physical reconnaissance on the ground - it’s not something that you can actually just easily do anymore,” Bumgarner stressed, especially in the post-9/11 environment where conspicuous photographing, videoing and other apparent physical surveillance can, and has - repeatedly across the nation - caused people to be detained and questioned about their activities.

“In other words,” said Bumgarner, “it’s gotten a whole lot harder for a terrorist to conduct the kind of conspicuous physical surveillance of a target that’s necessary for conducting a large-scale or mass casualty attack.”

Consequently, more sophisticated terrorists are utilizing easily accessible geospatial information, which was examined in the April *HSToday* cover report, “[Every Eye a Spy](#).”

## Taking Advantage Of Search Engines To Do Your Work

My favorite search engines, and I'm sure you have your favorites, are the Copernic Suite followed by Google and then others. I use them extensively and use them to my advantage when doing research and I just don't have the time to sit in front of the computer and type in all the keywords. First let me start with the Copernic Suite. It is comprised of [Copernic Agent Professional](#), [Copernic Tracker](#) and [Copernic Summarizer](#). Tracker and summarizer are exactly what the titles imply. The tracker keeps track of websites and alerts you when there are changes to it. Summarizer will take an article and summarize it to a more manageable article; and you determine the number of words in the summarized article. The following applies to copernic agent professional and how to customize it to work for you.

You'll notice on the graphic below how I have formatted my copy. On the right side is a box where folders are created as I have done. In the top center are the keywords I used for the Iran folder in the box at right. I have programmed the engine to do automatic searches at 0800 every day (by this time I have had my first cup of coffee and just waiting for all the results to come in). You also will notice that on the search term "Iranian military capabilities" there is a number 24 in parenthesis. These are the new results that came in at 0800, so you will always know about new results. Just below the box with the keywords are all the hits that came in. The green check mark indicates that it is a valid link. Now look at the left hand side in the quick search box and you should notice that I have 1005 search engines enabled. With these many search engines enabled you should be able to pin down what you're looking for.

The screenshot displays the Copernic Suite interface with several panels:

- Top Bar:** Favorites, Tools, Window, Help.
- Toolbar:** Analyze, Save Pages, Filter, Find in Results, Browse, Summarize.
- Results Panel:** Shows search results for "iranian military weapons", "iranian websites", "iranian naval capabilities", and "iranian military capabilities". The last result shows 40 results with "(24 new)".
- Folders Panel:** A tree view of tracked categories including Africa, Al Qaeda, Drug War, HUMINT, IEDs and EFPs, IMINT, Iran, MASINT, OSINT, and SIGINT.
- Quick Search Panel:** Shows "1005 engines enabled" and a list of categories: Favorites, The Web, Newsgroups, E-mail Addresses, Images, My Categories, Terrorism, Business & Economy, Computers & Internet, Encyclopedia & Reference, Entertainment & Media, Government & Law, News, Recreation, Home & Lifestyle, Shopping.
- Common Tasks Panel:** Create new search, Analyze results, Browse results, Filter results, Organize categories.
- Bottom Panel:** Displays search results for "USPACOM Speeches and Transcripts", "Iran Navy", "NAVAL POSTGRADUATE SCHOOL", "Maritime Interdiction in the Gulf", and "Fundamentals of Operational Warfighting". Each result includes a preview and a progress bar.

Let's now look at Google and see how it can be customized to work for you. What you're looking at now is the traditional page. On the upper right is the "sign in" link. Click on this link to establish an account. Once you establish an account click on the news link to go to the personalized news page.

Clicking on the news link brings up the following page. You'll notice on the left hand side where I have established all keywords of interest to me. I have included all the classical "INTS" along with some others of interest. Clicking on a keyword, for example "explosively formed projectiles", brings up the latest search on that term. I use the same keywords in Copernic above because the results are not always the same for both search engines. By using two search engines to do my bidding I stand a better chance of getting a plethora of results and thus more solid news from around the world.

The screenshot shows a Mozilla Firefox window displaying the Google News homepage. On the left, a sidebar titled "My keywords" lists various intelligence-related terms: Top Stories, Recommended, World, U.S., HUMINT, IMINT, SIGINT, OSINT, counterterrorism, "explosively formed proj", "improvised explosive dev", Iraq, "open source intelligence", North Korea, Iranian revolutionary gua, MASINT, GEOINT, Terrorism, and Most Popular. A black arrow points from the "My keywords" sidebar down to the "Top Stories" section of the main content area. The main content area features a large Google News logo and a search bar. Below the search bar, a red banner reads "Click here to personalize your page." Another black arrow points from this banner down to a blue button labeled "Edit this personalized page". The main content area displays several news stories, including "Thompson a Target at GOP Debate" and "Military probes how nukes flew over US". At the bottom of the main content area, there's a "Recommended for ben.benavides@gmail.com" section. To the right of the main content area, there's a sidebar with links like "Remarks by the CIA Director at Ceremony for the NCS Director", "Terrorism in Germany thwarted, police say", and "IMI Urban Fighter APC/IFV Out-MRAP's MRAP for Anti-IED/EFP Protection". A blue arrow points from the "Edit this personalized page" button to a modal dialog box titled "Edit this personalized page". This dialog box contains a heading "Drag to rearrange page. Click to edit." and a grid of colored boxes representing the user's keywords: World (blue), U.S. (red), HUMINT (purple), IMINT (green), SIGINT (orange), OSINT (yellow), counterterrorism (light blue), "explosively formed proj" (pink), "improvised explosive dev" (light green), Iraq (light blue), North Korea (light green), Iranian revolutionary gua (light blue), MASINT (light green), GEOINT (light blue), and Terrorism (light green). Buttons at the bottom of the dialog box include "Save layout", "Show headlines only", and "Reset page to default".

Clicking on the "edit this personalized page" brings up the following where the user enters all the keywords of interest to them. You'll notice that all my keywords match those on the left hand side.

**Tricks Of The Trade For The Open Source Analyst**  
**Looking For Old Information**  
**By Etan Horowitz**  
***The Orlando (Fla.) Sentinel***

Things move so fast on the Internet that sometimes the information you are looking for has been removed or changed. Using Google's Cached Links and the Internet Archive's Wayback Machine can help you find what you are looking for even if the content is no longer online.

1. If you know that the information you are searching for is no longer online, go to Google.com.
2. Enter as much information as you can into Google's search field and hit enter.
3. When your search results appear, find the result with the most appropriate description and click on the link at the bottom left of the result that says "Cached." This will open a snapshot of the Web page that Google took as it was indexing it.  
Clicking on the cached link may also be useful if you ever click on a search result link that doesn't work.
4. If you don't know exactly what you are looking for or are curious about a previous version of a Web page, go to web.archive.org to search the Internet Archive's Wayback Machine, an archive of 85 billion Web pages dating back to 1996.
5. Type the URL of the Web site you want to see and click "Take Me Back." This will bring up a collection of archived pages from that Web site, organized by year.

Cached Links may not be available for all Web sites and less popular Web sites may not be included in the Internet Archive Wayback Machine.

## Recommended Search Tips

### \* \* \* Google Can Do That? \* \* \*

\* Google lets you search for a range of numbers, in any format. To include a number range in your search query, type in the lower and upper numbers, separated by two periods - e.g., 15..50 I had a chance to try out this feature in a real-life search; I wanted to find a set of wireless headphones on Amazon.com costing between \$50 and \$100. I typed in the query (wireless OR cordless) headphones \$50..\$99 site:amazon.com and, sure enough, I retrieved a wide selection of wireless headphones within my price range.

Note that Google is smart enough to recognize decimal points - some of the items I retrieved weren't an even dollar amount but were, for example, \$57.83. This feature could also come in handy if you are looking for a mention of a range of years.

\* Speaking of date-searching on Google, you can limit your search to only those pages added or changed within the past [whatever] days. This can be a useful feature if you re-run a search regularly; just limit your search to the pages added or modified since you last ran your search. You can do this not by adding text in the search box but by modifying the search results page URL by adding the following text to the end of the URL and clicking [Search]: &as\_qdr=dn (where n is the number of days you want searched) So, for example, to limit my search to the last 18 days, I would add &as\_qdr=d18 to the end of the search results page URL.

Keep in mind that this isn't a perfect date-limiting search. Some web content management systems automatically refresh a web page frequently, without necessarily making any changes to the page. Those pages will have a recent date but the content within them may have been unchanged for months.

\* If you are based in the US, you can search for local companies through your cell phone, regardless of whether or not your phone has web capability. If you call 1-800-GOOG411 (1-800-466-4411), you will be asked to say the city and state you want information on - Boulder, Colorado, for example - then you say the type of business or specific business name you want - for example, "book store" or "Barnes and Noble". A text-to-speech program will read you the top eight results from its local search (<http://local.google.com>). If you want, Google can automatically dial any of the first eight businesses' phone number, or you can ask to have the address and phone number read to you.

You can also get quick answers to simple queries by texting Google from a US cell phone. Send a text message to 466 453 (GOOGLE) and then type your query in the text box and send it. Within seconds, you will receive a text message with one of Google's Quick Answers. The default is for Google to take your query and attempt to find a Quick Answer. If you want a search of the web, put the word web at the beginning of your search, such as web avian flu. This will return you a text message with a snippet of the first search result, along with a link to mobile-formatted page of the search results. See <http://sms.google.com> for more information on this service.

I recently discovered [Intelways](#), a nifty way to search a number of search engines sequentially. It's not a metasearch engine; it lets you click from one resource to another. Its main claim to fame is that it categorizes the tools by broad type of search -- general, images, video, news, social (blogs, social networking sites, social bookmarking sites, etc.), file-type searching, reference, academic, business, tech and (natch) shopping. ## **PowerSet.com**

We have a new player in the semantic search arena; "semantic search" refers to the idea that a better way to find the most relevant material is to not just look at word frequency, location, links to a page and so on but to understand the sense of what is being asked and the sense of what is on web pages, and then to match the most applicable pages. For example, if I typed in a query for *stock*, a semantic search engine would see that this was in the context of livestock, and would find other pages that have to do with animals on farms rather than about shares of ownership in a company, flowers, or racing cars.

[PowerSet](#) uses a technology that attempts to mine meaning out of web pages -- specifically, [Wikipedia](#) articles. This isn't a general-purpose search engine, but it is a tremendous tool if you are looking for information on a subject that spans a number of Wikipedia articles, or that has a number of meanings. Take "Barack Obama" as an example. There are [thousands of articles](#) that mention Obama -- the Wikipedia article specifically about him, as well as articles about politicians who have endorsed him, his early career, the roles of race and religion in the US presidential campaign, and so on.

Rather than going through all of those entries, including the extensive article specifically on Obama, head over to PowerSet and you will get a [single search result](#) that pulls together what it judges to be the most relevant information about Barack Obama. There is a nice summary of who he is, the key facts about his career, and a relevance-ranked list of Wikipedia pages that mention him.

What I find particularly interesting is the "Factz" section of the page, which attempts to pull together *significant statements about* Barack Obama in the Wikipedia articles. So, for example, the Factz for Barack Obama include information that he introduced the following pieces of legislation:

- Iraq War De-Escalation Act of 2007
- Response Act
- Pandemic Preparedness
- Transparency Act
- Federal Funding Accountability

While that isn't a comprehensive list of the pieces of legislation he has introduced, these are probably the most significant ones, since this list includes only legislation that was mentioned in Wikipedia articles.

PowerSet is best used for those searches that cover a number of topics or areas. It's not perfect, and it only searches Wikipedia, but I find it an exciting new approach in the efforts of search engines to make sense out of web content. ## **Bing Gets Smart**

Bing, the search engine formerly known as Microsoft Live Search, has surfaced a number of its advanced search commands. Some of these are new, some simply haven't been publicized. You can see some of Bing's features in its Advanced Operator Reference, a minimalist page that lists operators and, with another click, gives a brief description and example of when the operator could be used.

Following are a list of four Bing commands:

- Contains: specifies that any page retrieved has links to specific file types. Syntax is contains:files\_type Example: apiculture contains:ppt This is not a search within pages of those file types; the example here is looking for pages that both contain the word "apiculture" and have links to files with the .ppt extension. Other file type extensions you can search for include doc, pdf, ppt, rtf, txt and xls.
- HasFeed: specifies that any page retrieved has a link to an RSS feed on the page. Syntax is feed: Example: apiculture hasfeed: As with the contains: command, this isn't searching within RSS feeds; this search finds pages with RSS feeds on them.
- LinkFromDomain: identifies all the outgoing links on a specific domain, optionally limited to a particular topic. Syntax is linkfromdomain:a\_domain\_name To find some tutorials on renewable energy, for example, you might search for pages that are linked-to from HowStuffWorks.com and that also have the phrase "renewable energy" -- linkfromdomain:howstuffworks.com "renewable energy".
- Norelax: lets you specify that all your search terms, not just the first four, be included in the query. Syntax is norelax:search\_word Use this operator to indicate to Bing that all words in your query must be weighted equally. This tells Bing not to "relax" its Boolean AND for the fifth and subsequent words in a query. If, for example, you are creating a more complex query and want to ensure that Bing treats all words as mandatory, you could search "west nile" mosquito non-toxic norelax:spraying, using norelax: to make the search word spraying mandatory.

## Using Yahoo to Brainstorm

Yahoo! has an experimental service called Correlator, part of its Sandbox area where Yahoo tries out new ideas. This particular demonstration is useful for research brainstorming; it gives you information -- not just search results -- that can help you get a better sense of the various aspects of an idea.

At its core, Correlator is a sophisticated tool for mining Wikipedia; its default search results page groups Wikipedia snippets by category. The search query "lithium ion batteries", for example, gives me information organized into areas such as rechargeable batteries, electric vehicles, and electric batteries. But what's more interesting is that below the search box are icons for Names, Places, Events, Concepts, News and Answers.

When I click the Names icon, the result is a dynamic word cloud and list of frequently-occurring names (geographic, personal, company, etc.) related to lithium ion batteries.

Clicking the Places icon displays a map of the world, with flags in areas that are significant in the context of lithium batteries, such as China (manufacturing), Austin (research and development), and Chicago and Japan (which both have tests of lithium battery-powered vehicles). This alone gives me ideas on where to look next -- local Chicago and Japanese papers, for example, if I want to know what is past the drawing board stage.

The Events icon displays a time line of events, again culled from Wikipedia, pertaining to Li-ion batteries. This helps me see, among other things, the speed with which Li-ion batteries have been incorporated into various devices. The News icon produces snippets from 20 or so recent stories in Yahoo News on the batteries. Clicking the Answers icon runs my query in the Yahoo Answers database; since Yahoo Answers tends to be consumer-oriented, the results help me identify the most common consumer concerns regarding batteries. The Concepts icon produces another dynamic word cloud and list of key words and phrases from the relevant Wikipedia articles. Of all the icons, this is the most variable in terms of usefulness.

While limited to Wikipedia results, I have found Yahoo Correlator to be a quick way to see the wide range of possibilities for me to explore with a new concept.

Killing Time (only on launch/lunch breaks)
